Introduction

SmartBridge is easy to use Windows based Weighbridge software with multilingual user interface.

SmartBridge supports all types of the weight indicators, in addition the ability to receive the weight signal from PLC or from other PC using TCP/IP. SmartBridge is highly configurable software which makes it suitable for any kind of weighing system. Using its ability to work with external relay modules, RFID, CCTV, and scoreboards you can configure SmartBridge to work as full automatic unmanned weighing system.

Key features

- Multi language user interface, currently application available in (English, French, Arabic, Portuguese, Indonesian). User can select/change application language during the installation or at runtime.
- Support all types of weight indicators.
- Easy to install. Small size installer and no need for any external frameworks or tools.
- Easy and straightforward way to connect the software to the weight device/indicator.
- Multi-device support, you can add unlimited number of weight devices/indicators and switch between these devices easily at runtime.
- The software can read and display the weight value from two devices/sources at the same time using its dual weight display interface (Professional edition only).
- The software can work on local networks (*Professional edition only*), you can choose to install Client/Server/Standalone version from one installation package.
- Web interface using embedded Http Server (in Professional edition only).
- Up to 16 custom/backup fields and ability to show/hide/reorder all fields in the Operation screen; you can choose from four different types of custom fields: Text, Number, Serial device and Formula.
- Support controlling relay modules, which give you the ability to control external devices like: traffic lights, gate barriers, etc. (in Professional edition only).
- CCTV/Cameras support. The software can display videos from up to 16 CCTV/Cameras. (*Professional edition only*).
- RFID support, you can use USB and serial port RFID readers (*Professional edition only*).
- Stock and inventory management (*Professional edition only*).
- Support sound alerts. The software can play sound alerts on specified events. You can record the sound alerts by yourself or use existing sound files (*Professional edition only*).
- Support displaying the weight value on external scoreboards (*Professional edition only*).
- Email messaging, you can configure the software to send emails at specific times or on specific events; the emails can contain: reports, tickets summary and error messages. (*Professional edition only*).
- Support sharing or transmitting the weight value on local network; this will let you use multiple computers to work with one weight device/indicator. (Professional edition only).
- Support receiving the weight value from PLC or from Another PC that sharing the weight value/signal. (Professional edition only).
- POS/Self service mode, this mode is more suitable for unmanned/Self-Service weighing systems (*Professional edition only*).
- Automatic mode; you can run the software in this mode to operate unmanned weighing systems that have RFID scanners only —No self service screens. (*Professional edition only*)

- Plug-ins support, you can write your own plug-in for SmartBridge. You can use the plug-ins to connect SmartBridge to other applications like: accounting programs, billing programs, ERP systems, etc. (*Professional edition only*).
- Support Barcode/Qr; you can print barcode on the weight ticket, or scan the barcode to fill the ticket fields automatically from the printed barcode (*Professional edition only*).
- Support touch screens; the software has on-screen keyboard and it also supports the touch screen gestures.
- External utility to import data from other applications.
- Protection from saving negative or unstable weight values into the weight tickets.
- You can design printable templates for the weight ticket, you can add unlimited number of templates, and you can switch between templates easily at runtime.
- We provide a ticket designer software to design more complicated ticket printable templates
- Support multi users and multi roles.
- Highly configurable software; it has many settings/options that you can adjust to make SmartBridge suitable for your business.
- Easy database management; you can make database backup, restore database, archive the weighing tickets or create a new database.
- You can clear the ticket table and reset the ticket numbering without losing other data such as: drivers, vehicle numbers, etc.
- Highly configurable search/report; it has options to print the result or export excel, pdf.
- Accounting options.

What's new in version 4.x?

- Email messaging, you can configure the software to send emails at specific times or on specific events; the emails can contain: reports, tickets summary and error messages. (*Professional edition only*).
- POS/Self service mode, you can run the software in this mode to operate unmanned/Self-Service weighing systems. (*Professional edition only*).
- Automatic mode; you can run the software in this mode to operate unmanned weighing systems that have RFID scanners only —No self service screens. (*Professional edition only*)
- Archiving the weight tickets and reset the ticket numbering to a specified number.
- Support four types of custom fields: Text, Number, Serial device and formula.
- Plug-ins support; you can write your own plug-in for SmartBridge, you can use the plug-ins to connect SmartBridge to other applications like: accounting applications, billing applications, ERP systems, etc. (*Professional edition only*)
- Support handling two scoreboards, two printers and two rfid readers at the same time. (*Professional edition only*)
- Summary report, a new report that shows the net weight total and the tickets count grouped by material name and client name.
- Other minor changes and enhancements.

Hardware and software requirements

Supported operating systems:

The Professional edition works on all Windows starting from Windows 7 and higher (32/64 bits).

The Standard edition works on all Windows starting from Windows XP and higher (32/64 bits).

Hardware requirements:

- Computer with serial port (COM port) to connect the scale device/indicator.
- Monitor with at least (1024X768 pixel), using less resolution will cause some parts of the application to disappear.

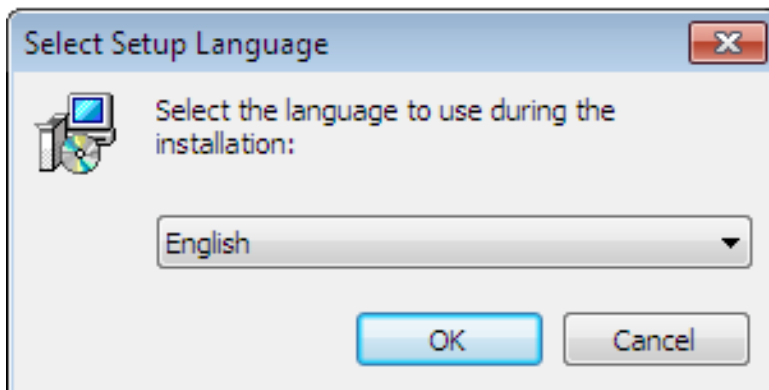

Installation

Three easy steps to run and operate SmartBridge:

- 1- Install SmartBridge software.
- 2- Add and configure the weigh scale device
- 3- Design or import the ticket print template.

Installing SmartBridge is easy. Run Setup.exe and follow the setup wizard steps. There is nothing unusual in the setup wizard.

First choose the language to use during the installation; this language will be the default application language also. You can change the application interface language later from the application options.

Accept the license agreement

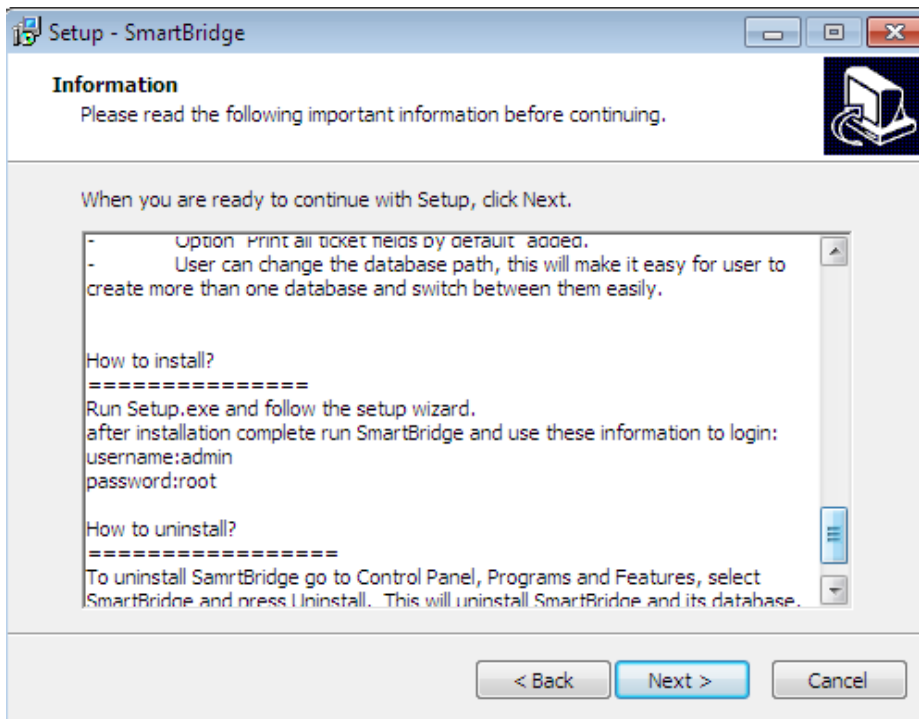

Then you can read some information about the application. In this page also you can find the default username/password to login to the application.

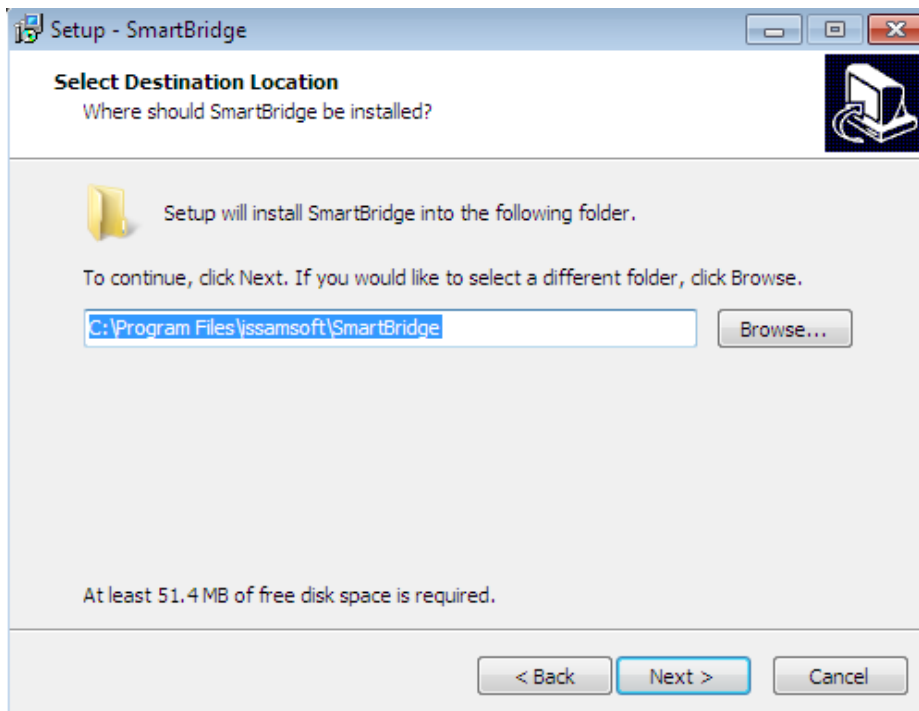

Username: admin

Password: root

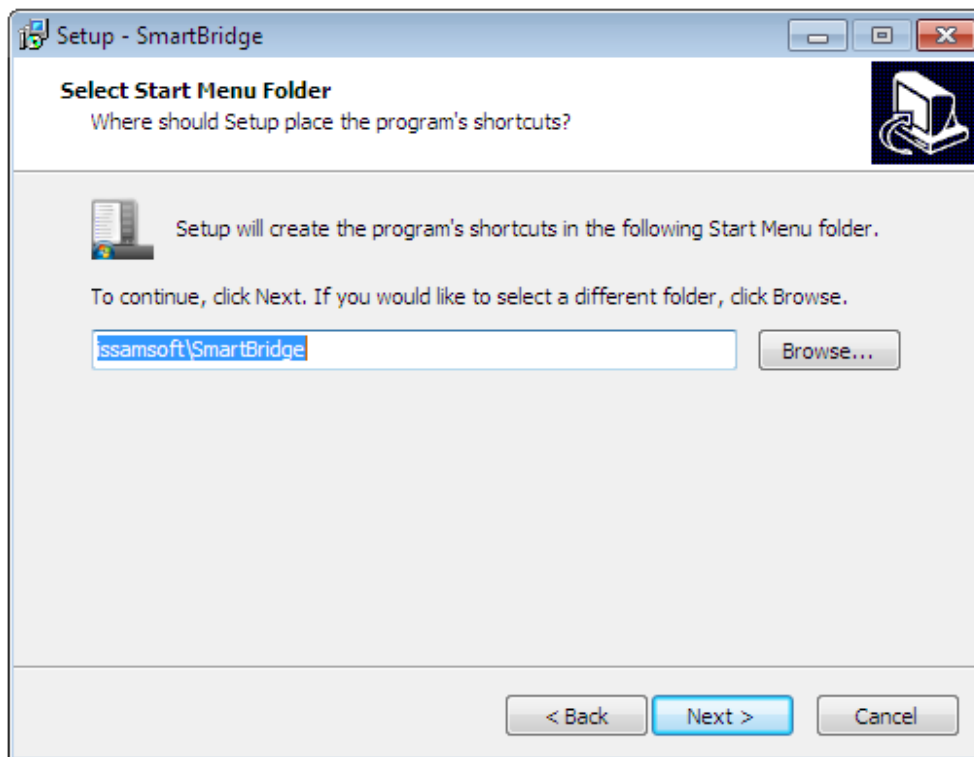

SmartBridge

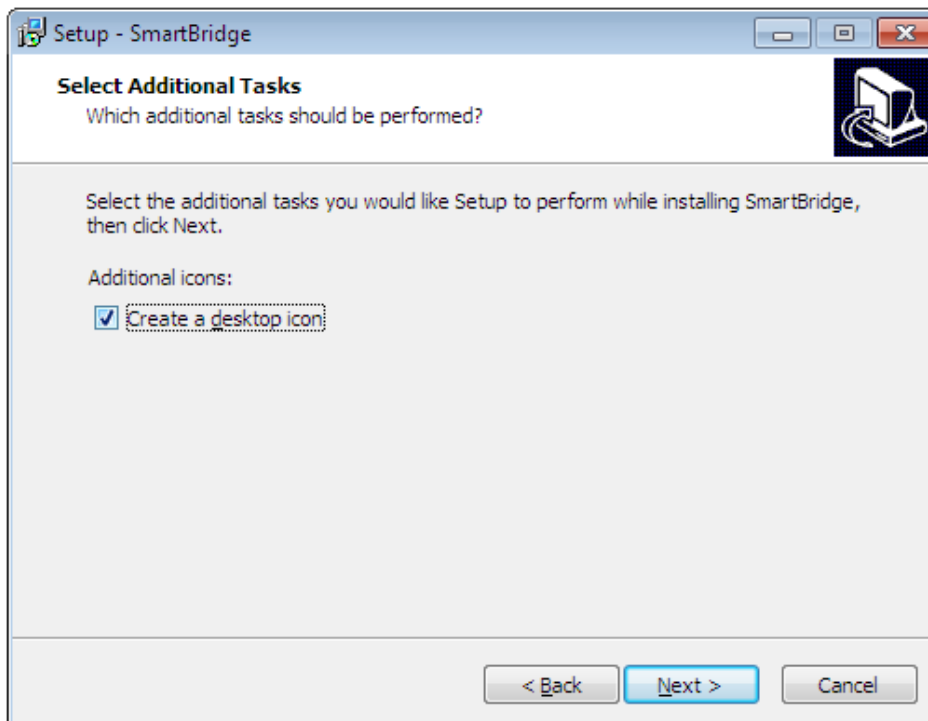

Then select destination location.

Then select start menu folder

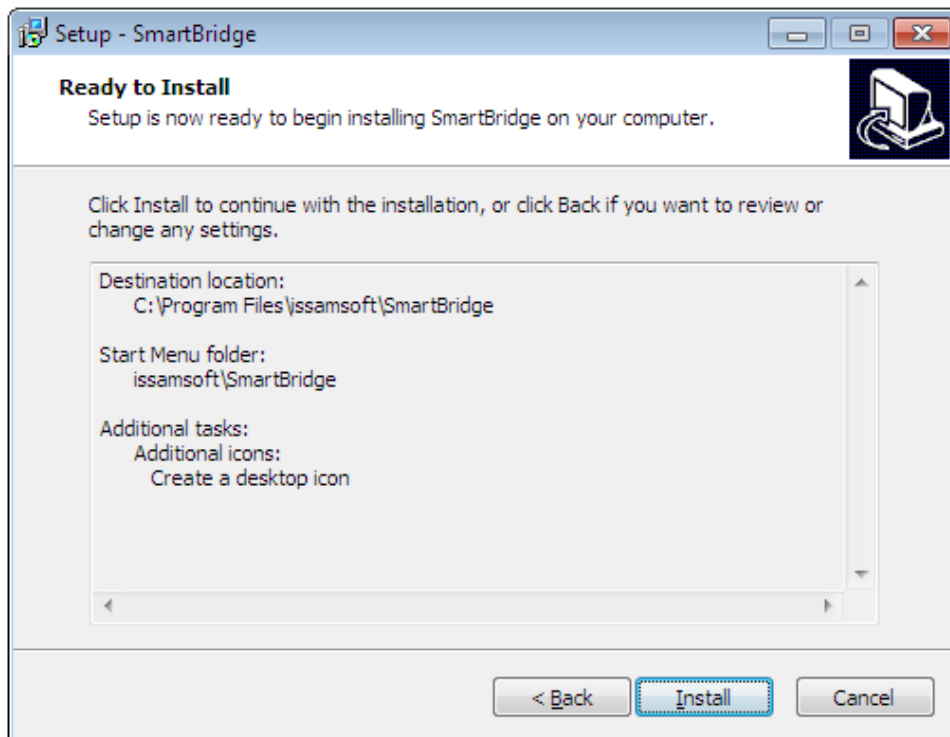

Choose create a desktop icon

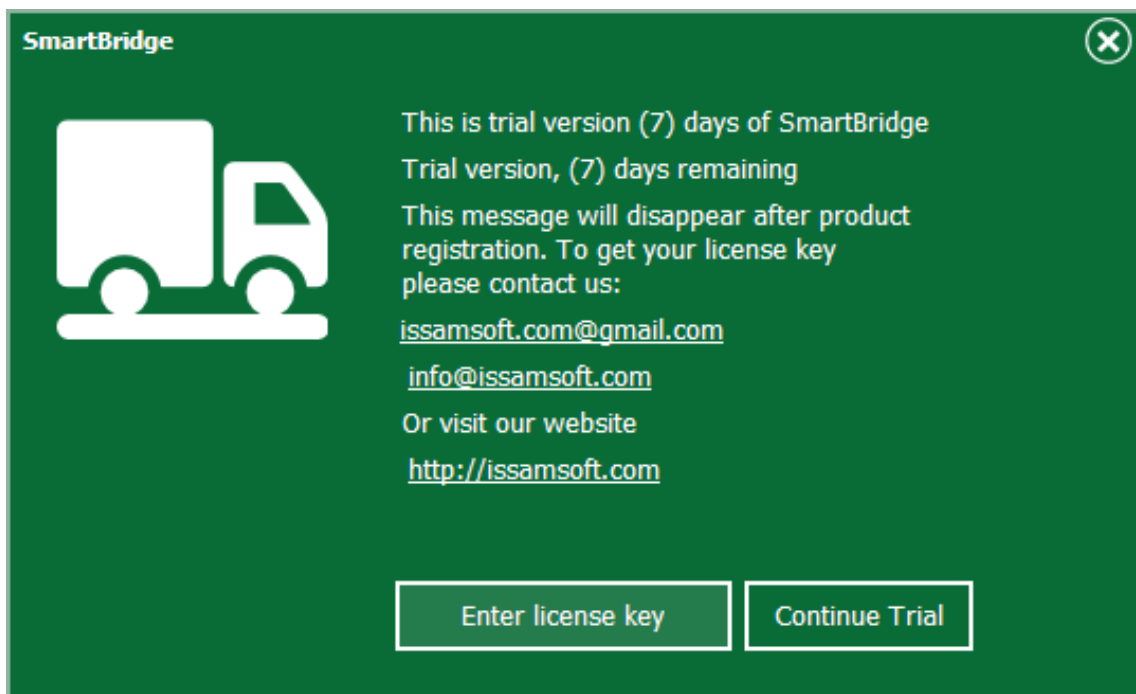

The installer is ready to install the application, just press the Install button

SmartBridge

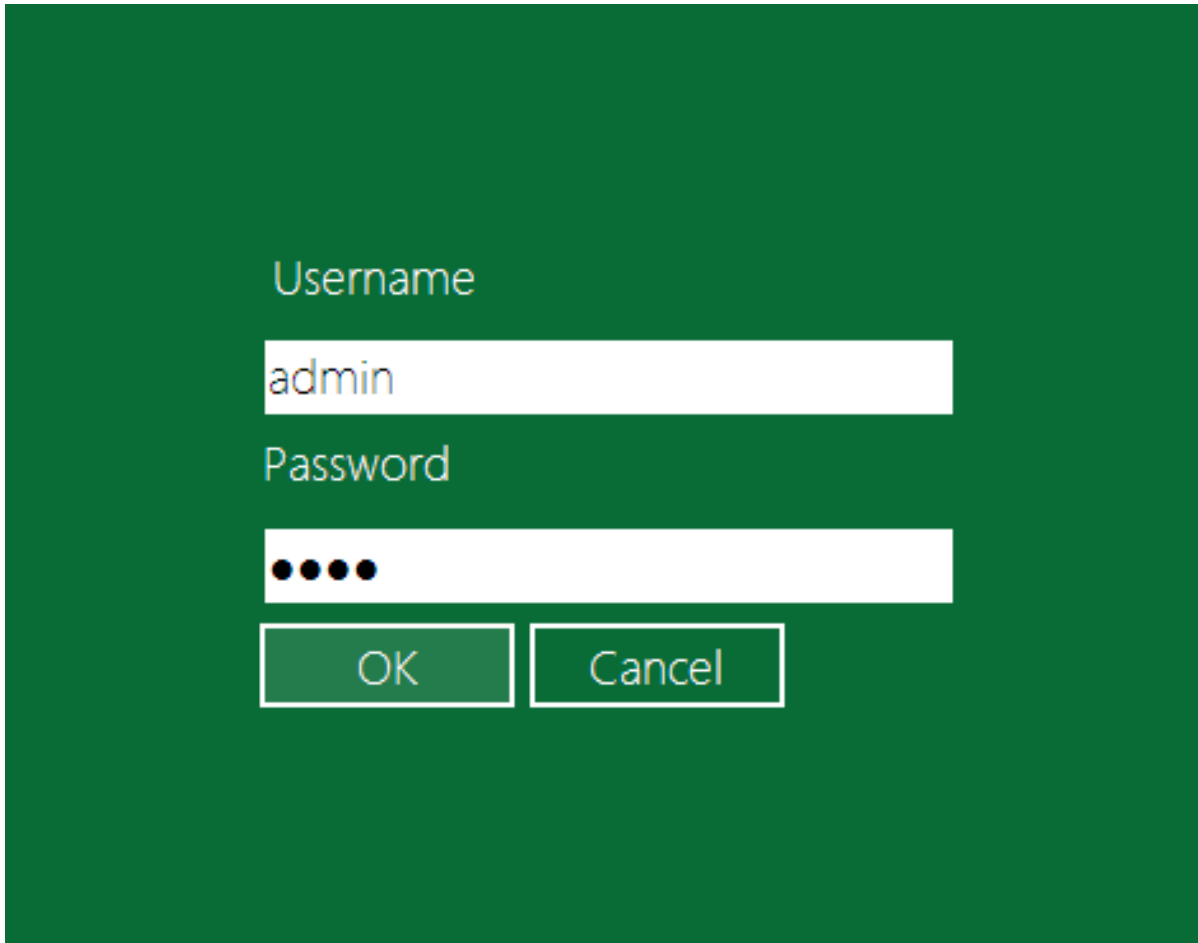

After installation complete, run SmartBridge, trial dialog will pop up; this dialog will disappear after activation with a valid license key.

Press "Continue Trial". In the login screen use the default username/password to login to the application.

Username: admin

Password: root

A login dialog box with a dark green background. It contains two white text input fields. The first field is labeled "Username" and contains the text "admin". The second field is labeled "Password" and contains four black dots. Below the password field are two buttons: "OK" and "Cancel".

Username

admin

Password

••••

OK Cancel

After login you will see the main application window/screen. This screen is the “Operation” screen.

The image shows the SmartBridge software interface, which is a ticket entry form. The interface has a green header bar with the SmartBridge logo and version number (1.2.0.99) on the right. Below the header, there is a black bar displaying the time (08:47) and date (25-05-2016) in red. The main form area is divided into several sections. On the left, there are fields for Ticket No. and Pending Vehicle No., both with a search icon. Below these are Ticket Details, including Vehicle Number, Driver, Material, Quantity, Unit Price, Company, and Warehouse, all with dropdown menus. There is also a Notes field and a Tare checkbox. On the right, there are fields for Tare Weight, Date/Time, Gross Weight, Date/Time, Net Weight, and Total Price. At the bottom, there are buttons for New, Save, and Print, along with a set of navigation icons. The footer shows the Ticket Template (Basic Template), the user (Admin), and the version (1.2.0.99).

Read more information about the operation screen in [Operation Screen chapter](#).

The next step after installation is to add the scale device(s)/indicator(s) to the application. See “[Add and Connect Weight Device/Indicator](#)” for more information.

After adding the scale device/indicator and connecting it successfully, you need to design the ticket template, or you can use the embedded basic template is not suitable for you. Read “[Design Ticket Template](#)” for more information. There are some free ticket templates on our website, you can download it also and check if it's suitable for you.

After connecting to the scale device and design/select the ticket template you can now use the application. Read “[Operation Screen](#)” for more information.

Operation Screen

The Operation Screen Parts

The next image shows the main parts of the Operation screen, which is the main screen in the application.

The screenshot shows the SmartBridge Operation Screen with the following labeled parts:

- Search area:** Points to the top left section containing 'Ticket No:' and 'Pending Vehicle No:' fields.
- Application Control Buttons:** Points to the top right corner containing icons for application control.
- weight:** Points to the large red digital display showing '2100 Kg'.
- Weight fields:** Points to the section containing 'Tare Weight', 'Gross Weight', 'Net Weight', and 'Total Price' fields.
- Ticket fields:** Points to the section containing 'Vehicle Number', 'Driver', 'Material', 'Quantity', 'Unit Price', 'Company', 'Warehouse', and 'Notes' fields.
- Ticket control buttons:** Points to the bottom left section containing 'New', 'Save', and 'Print' buttons.
- navigation buttons:** Points to the bottom left section containing navigation icons.

The bottom status bar shows: Connected | Device1 | Ticket Template: Basic Template | Admin | Version 1.2.0.99

Application control buttons

Application control buttons (close, minimize, logout, ...) exists in the upper right corner.

Close application button.

Minimize application to the taskbar.

Logout current user

Display onscreen keyboard

The screenshot shows the SmartBridge application interface. At the top, there is a status bar with the time 23:44 and the date 12-10-2018. The main area is divided into several sections. On the left, there is a 'Ticket Details' section with fields for Ticket No., Pending Vehicle No., Vehicle Number, Driver, Material, Company, Warehouse, Quantity, Unit Price, and Notes. Below this, there are checkboxes for 'Tare' and 'Auto'. In the center, there are input fields for 'Tare Weight', 'Gross Weight', and 'Net Weight', each with a corresponding 'Date/Time' field. On the right, there is a 'Total Price' field. At the bottom right, a virtual keyboard is displayed, showing keys for letters, numbers, and function keys. The interface is designed for data entry and management.

To change input language press: Shift + Esc

Refresh database, this command may be helpful when working over network, the application do this automatically in background while by pressing this button you ask the application to refresh the database on-demand.

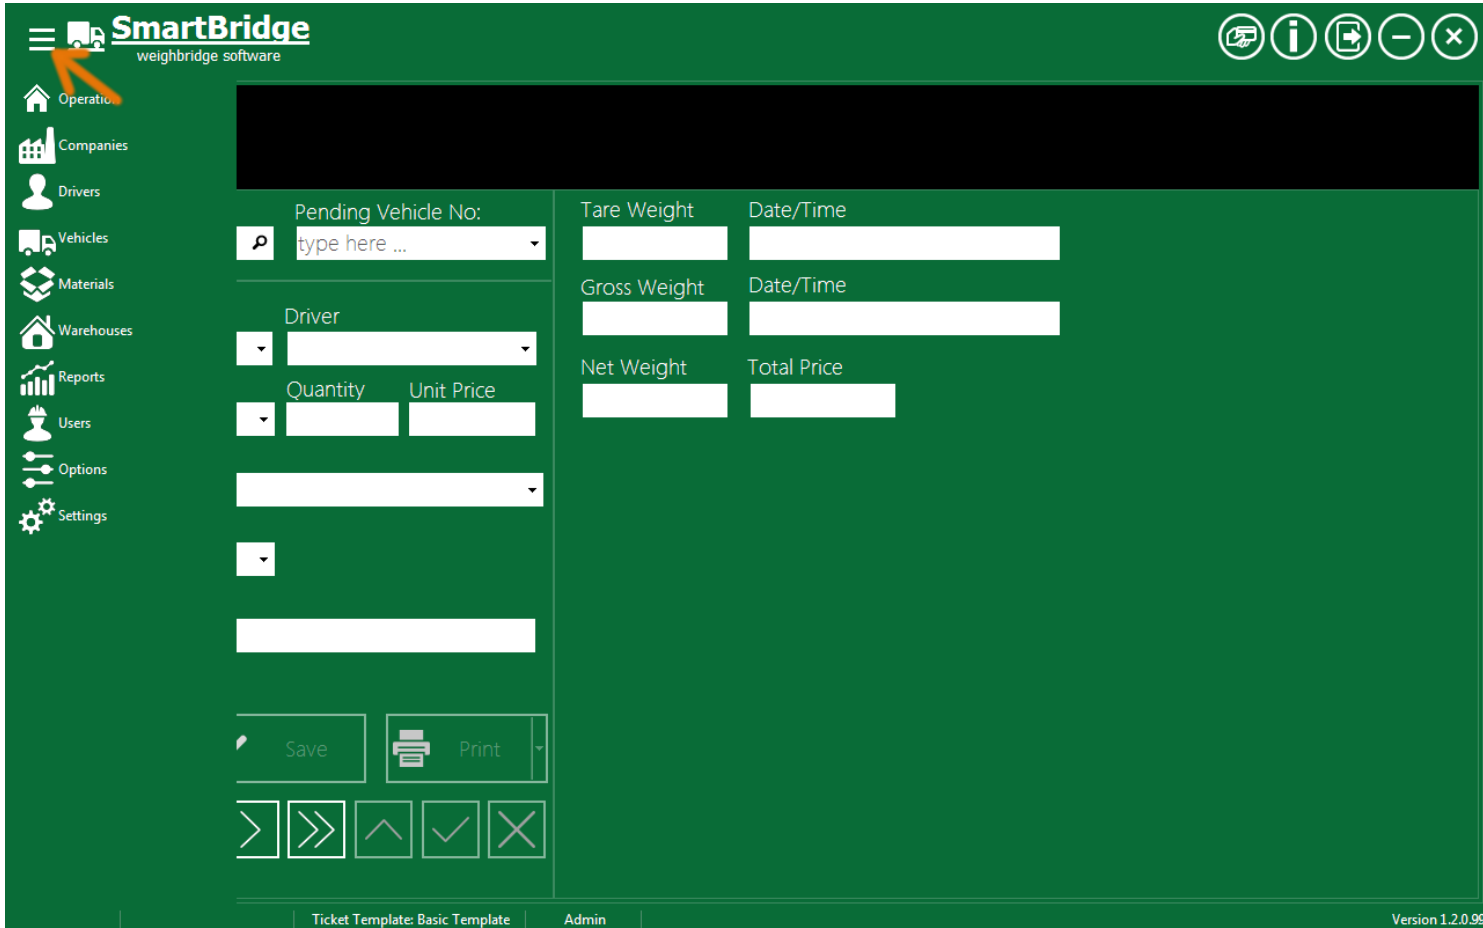

Show About information

Register trial version.

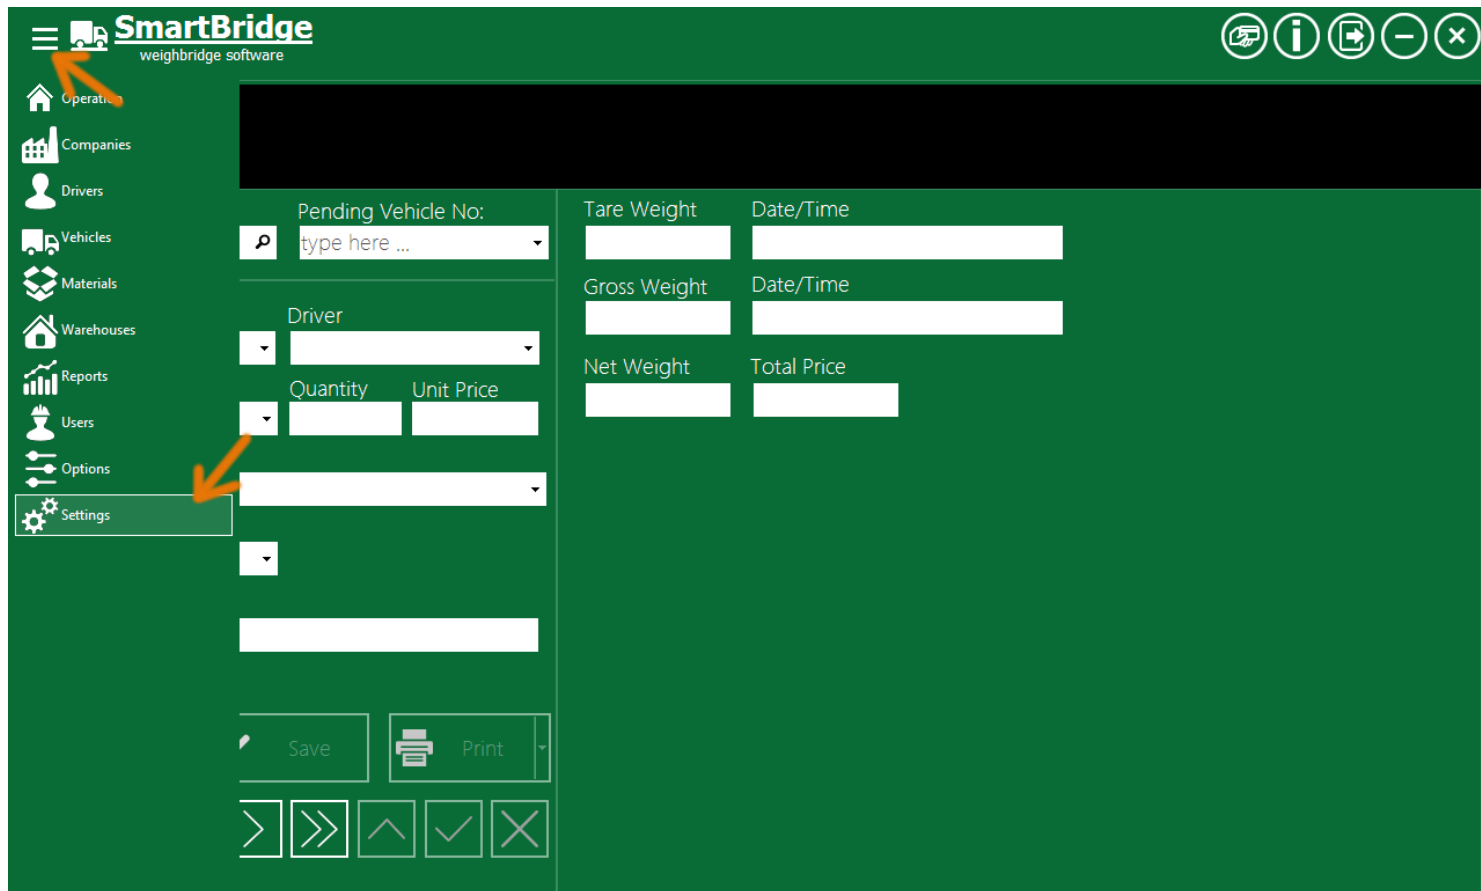

Application menu

The application menu button exists in the upper left corner; click on it to show the application menu which contains the names of application screens (pages), this menu shows only screens names that you have privileges/roles to access it. To hide the application menu, click the application menu button again.

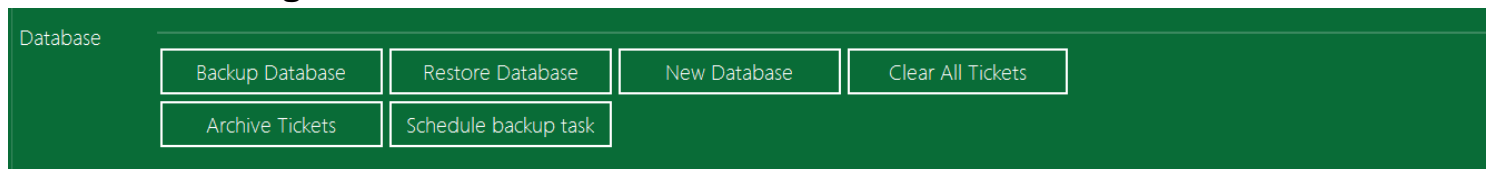

Settings Screen

To display and to change the application settings, press on the application menu and select “Settings”.

The screenshot shows the SmartBridge application interface. At the top, there is a green header bar with the 'SmartBridge' logo and 'weighbridge software' text. On the left side, there is a vertical menu with icons and labels for various functions: Home, Companies, Drivers, Vehicles, Materials, Warehouses, Reports, Users, Options, and Settings. The 'Settings' option, represented by a gear icon, is highlighted with a red box and a red arrow. The main area of the application is white and contains several input fields and buttons. At the top of this area, there is a 'Pending Vehicle No:' field with a search icon and a dropdown menu. Below this, there are fields for 'Tare Weight', 'Date/Time', 'Gross Weight', 'Date/Time', 'Net Weight', and 'Total Price'. There are also buttons for 'Save' and 'Print'. At the bottom, there are navigation arrows and a confirmation button.

Note: you need “Admin” role to access setting screen.

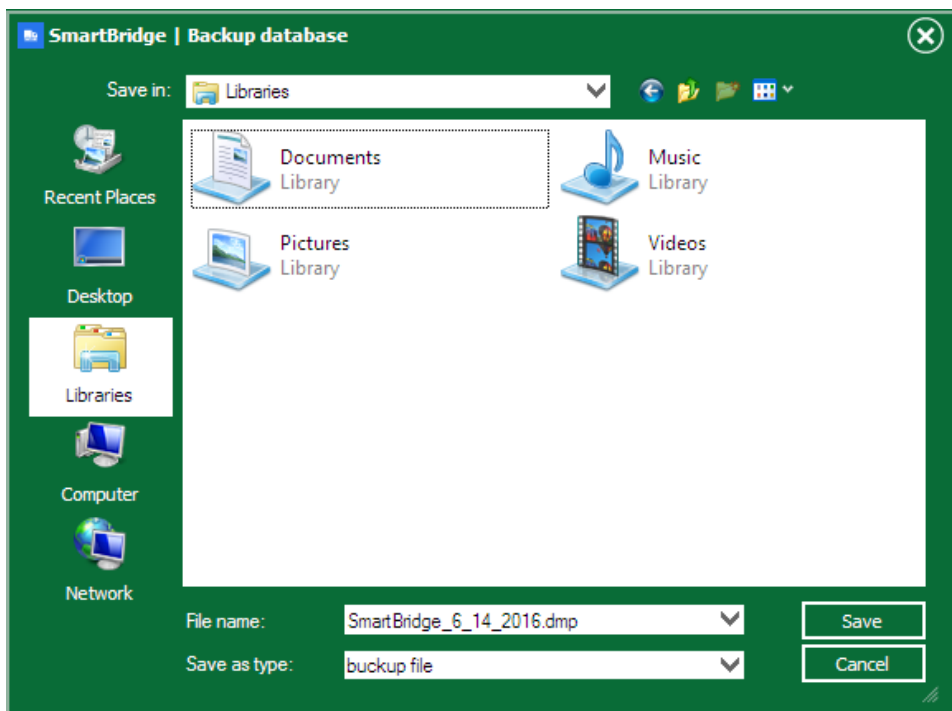

Database settings

The screenshot shows the 'Database' settings screen. It has a green header bar with the word 'Database' in white. Below the header, there are six buttons arranged in two rows. The top row contains 'Backup Database', 'Restore Database', 'New Database', and 'Clear All Tickets'. The bottom row contains 'Archive Tickets' and 'Schedule backup task'.

Next I will describe the job of each button/command in this section:

Backup Database

You can back up the software database by pressing “Backup Database” button, select path where you want to save the backup file and press “Save” button.

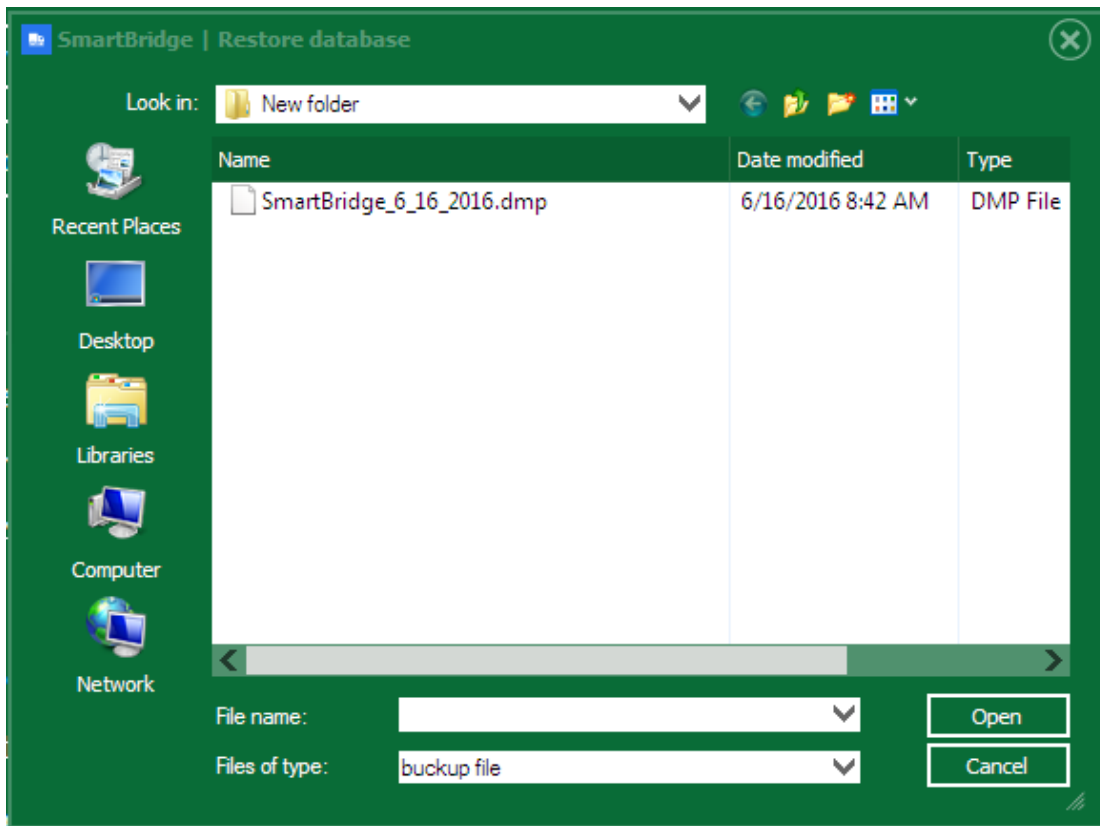

You can change the default filename if you want, but remember to use English letters only. Using other languages may cause backup process to fail.

Backup process may take some time. If the backup process succeeds it will display a success message.

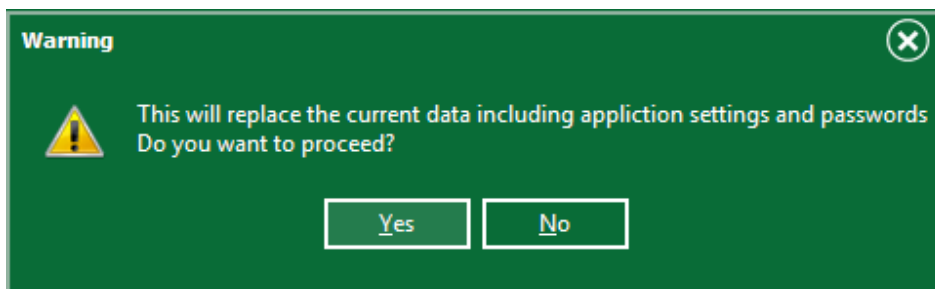

Restore Database

To restore database from a backup file, press on “Restore Database” button, select the backup file you want and press “Open” button.

Restoring the database will replace all current data with the data in the backup file including passwords and scale devices settings.

Click “Yes” button if you want to restore the database.

New Database

You can recreate the software database by pressing the button “New Database”; this will create a new and database for the software, this database will be empty and the software will return to its initial state just like after installation; this means after creating a new database you should use the default username/password to login to the application again.

Username:admin

Password:root

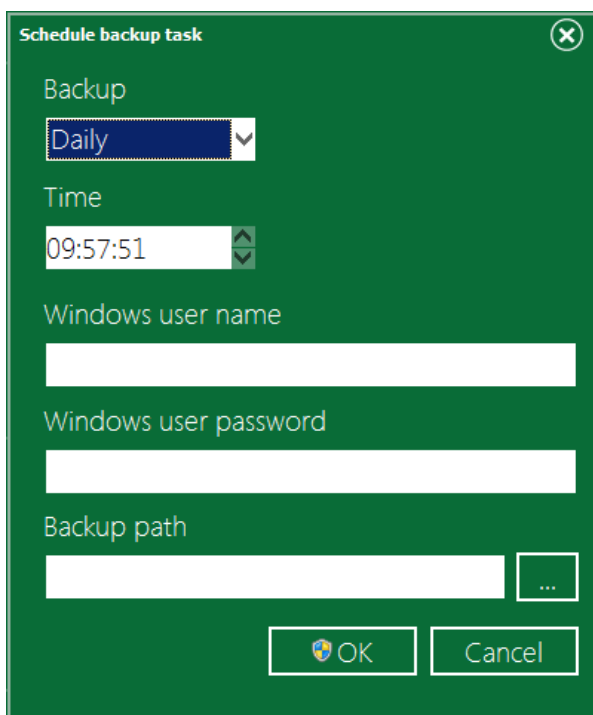

After creating new database you need to restart the application.

Clear All Tickets

This command will delete all saved weight tickets and reset the ticket numbering to any number you want. This command will delete tickets and will keep other data like drivers, vehicles, clients ...etc.

Schedule backup task

Using this command you can schedule the backup task, so the system will do an automatically daily backup even when SmartBridge is closed. When you press the button “schedule backup task” a new dialog will be shown.

Schedule backup task

Backup
Daily

Time
09:57:51

Windows user name

Windows user password

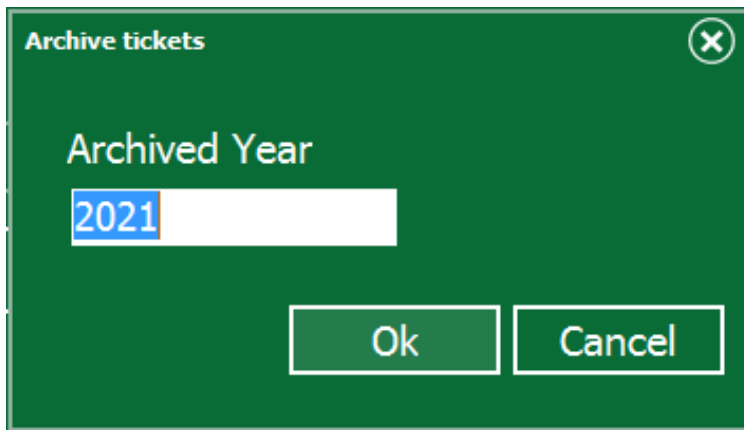

Backup path
 ...

OK Cancel

Enter the Windows user name and password and the path where want the database backup to be saved, remember that this scheduled task will not run if this Windows user is not logged at the specified time.

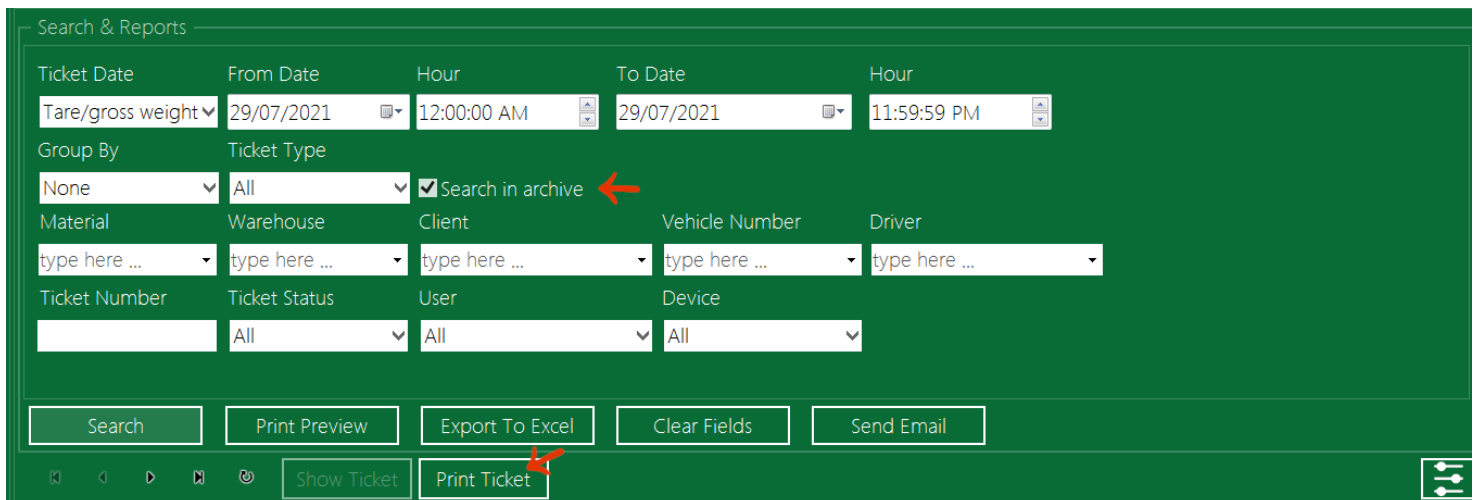

Archive tickets

The software gives you option to move all the current tickets to archive, when pressing the button “Archive Tickets” the software will ask you to enter the year of the archive you want to create, this year value will be as a title of this archive, all the current tickets will be moved to this archive and will be tagged with the year value you typed before -even if the tickets dates are not in this year.

The 'Archive tickets' dialog box is a green window with a close button (X) in the top right corner. It contains a label 'Archived Year' above a text input field. The input field contains the year '2021' and has a blue selection highlight. Below the input field are two buttons: 'Ok' and 'Cancel'.

You can search the archived tickets in the Reports screen by checking “Search in archive” option. You can print the archived ticket directly from the Report screen but you can’t show it in the process screen.

The 'Search & Reports' screen is a green interface with various search filters and action buttons. The filters are organized into rows: 'Ticket Date' (Tare/gross weight), 'From Date' (29/07/2021), 'Hour' (12:00:00 AM), 'To Date' (29/07/2021), and 'Hour' (11:59:59 PM). Below these are 'Group By' (None) and 'Ticket Type' (All). A checkbox labeled 'Search in archive' is checked, with a red arrow pointing to it. Further down are fields for 'Material', 'Warehouse', 'Client', 'Vehicle Number', and 'Driver', each with a 'type here ...' placeholder. Below these are 'Ticket Number', 'Ticket Status' (All), 'User' (All), and 'Device' (All). At the bottom are buttons for 'Search', 'Print Preview', 'Export To Excel', 'Clear Fields', and 'Send Email'. A bottom bar contains navigation icons, a 'Show Ticket' button, a 'Print Ticket' button (with a red arrow pointing to it), and a settings icon.

Connect the weight device

To connect SmartBridge to the weight device/source, press the application menu and select “Settings”

Note: the “Settings” screen available only for users that have “Admin” role.

Settings screen has many settings that will help make this software suitable for your business. The settings in this screen are grouped into sections. To connect the weight device go to the Weight section.

To connect SmartBridge to a new weighing device, press “New” button, this will display the New device window. SmartBridge standard edition can receive the weight value from weight devices/indicators only, while in the professional edition you have more options like receiving the weight value from PLC or from other SmartBridge instance running on a remote PC.

The screenshot shows the SmartBridge software interface with a dark green background. The main window has three sections: Database, Weight, and Operation. The Database section includes buttons for 'Backup Database', 'Restore Database', 'New Database', and 'Empty Tickets Table', along with a 'Schedule backup task' button. The Weight section has a 'Device/Source' dropdown menu, 'New' and 'Edit' buttons, a 'Use This Device' button, and a 'Connect' button. The Operation section contains several checkboxes and dropdown menus for configuring the system. A 'New' dialog box is open in the foreground, allowing the user to add a new device. The dialog box has a title bar with a close button. It contains fields for 'Name' (set to 'Device 1'), 'Type' (set to 'Weight Indicator'), 'Weight Unit' (set to 'Kg'), 'Interval' (set to '1000' ms), 'Port' (set to 'COM1'), 'Baud rates' (set to '9600'), 'Parity' (set to 'None'), 'Data bits' (set to '8'), 'Stop bits' (set to '1'), 'Flow control' (set to 'None'), 'Digits count' (set to '8'), 'Reverse read' (unchecked), and 'Decimal' (set to 'No decimal point'). There are 'Save' and 'Cancel' buttons at the bottom of the dialog box. Two orange arrows point to the 'Name' field and the 'Type' dropdown menu.

In the “Name” field enter any name you want; this name will help you identifying the connected device if you have multiple devices/sources.

The “Interval” value affects the speed of synchronization between the weight device/source and SmartBridge, use lowest values for fastest synchronization. Interval values below 150 are not recommended.

Select the port that connected to the indicator and set its properties (Baud rates, Parity, Data bits...) to make it compatible with the connected indicator. Usually you can find the suitable port settings in the indicator manuals.

In most cases you don't have to change "Digits Count" value unless you see extra numbers in the Operation screen next to the right of the actual weight value that appear on the weigh indicator. To solve this problem you can decrease “Digits Count” in the device settings corresponding to the count of extra numbers.

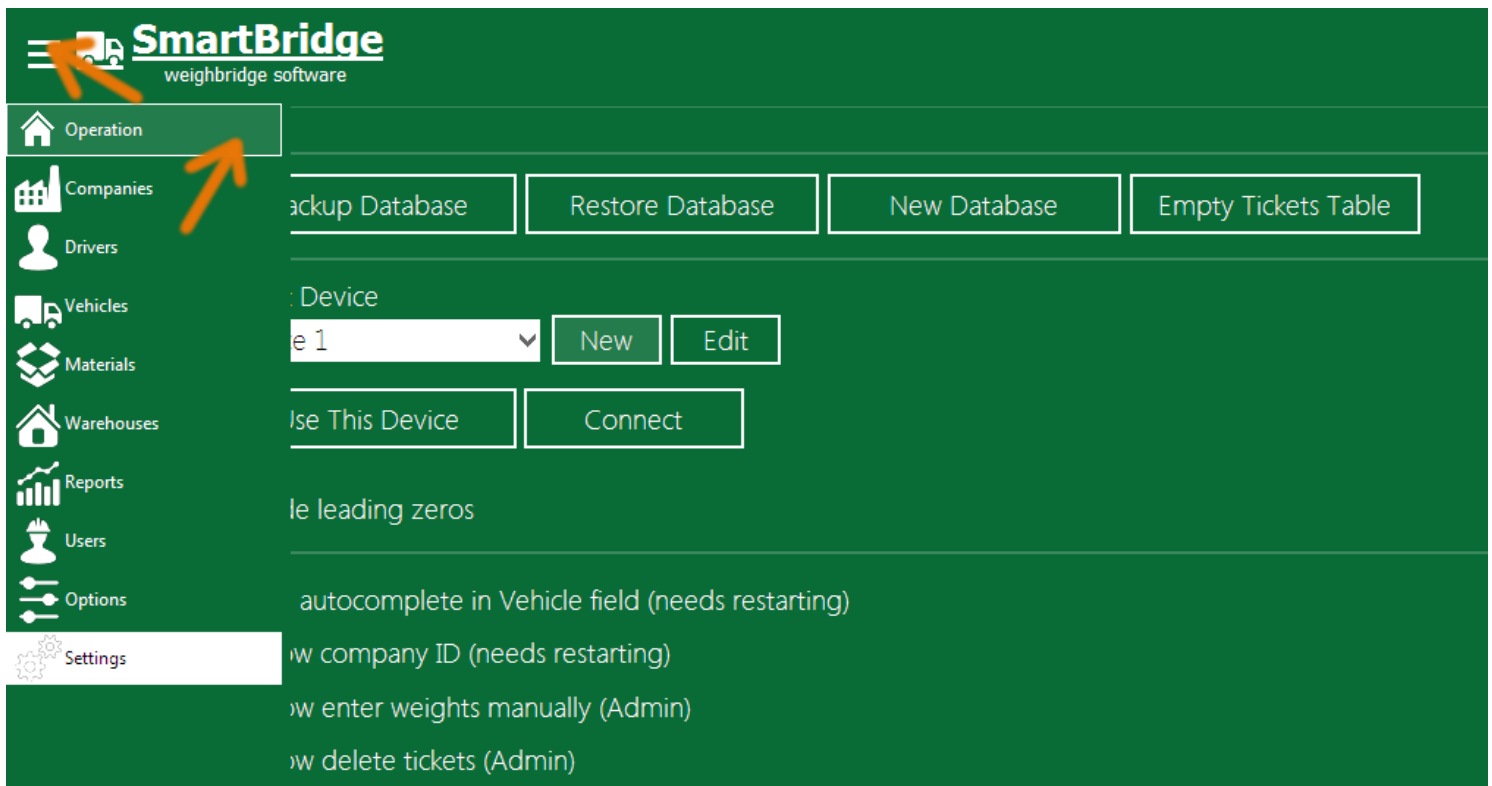

You may notice when connecting SmartBridge to some indicators that SamrtBridge shows the same weight value as indicator but in reverse order; in this case you can check the “Reverse read” and you will get the same value in SamrtBridge as in the indicator.

After finishing the Device/Source setting press the “Save” button, the device name will show up in the Device/Source list.

SmartBridge

Select the device name you want and press “Use This Device” button, then press “Connect” button, now go to the [Operation Screen](#), from the application menu select “Operation”.

If the device/source settings are correct, you should see the weight value on the SmartBridge display and it should match the value on the weight device.

If you didn't see the weight value on the software display or in case the weight value displayed is not equal the weight value shown on the weighing device/source then this means the device settings you entered are not correct and it should be changed.

To change the Device/Source settings, go back to the "Settings" screen and from "Weight" settings select the device/source you want and press the "Edit" button.

Make the changes you want and then press "Save" button, go back to the "Operation" screen and check the weight value. Repeat these steps until you get the same value on the weight device/source and on SmartBridge display.

In some weight indicator devices you may see extra zeros to the left like in the next image.

To hide these extra zeros go to the "Settings" screen and from the "Weight" section, check "Hide leading Zeros".

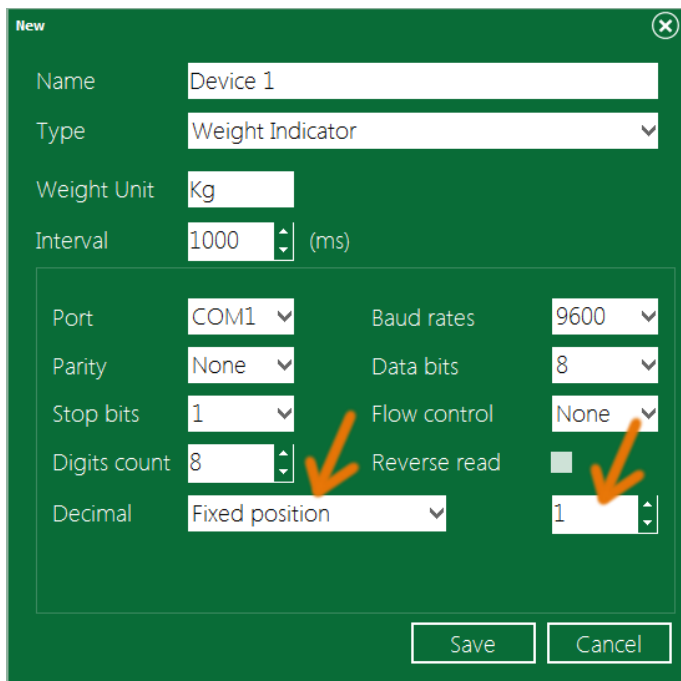

When dealing with some weight indicators you may also see extra numbers in the Operation screen next to the right of the actual weight value that appear on the weigh indicator. For example, you may see the real weight on indicator is 15 while the weight on SmartBridge is 1501 or 1500.

To solve this problem you can decrease “Digits Count” on the weight scale device settings, if you have two extra digits then set “Digits Count” to 6 instead of 8.

If you want to use/read decimal weight values, set the Decimal option to Automatic, if the Automatic option did not work, you can set the Decimal option to “Fixed position” and then set the decimal position from the right. Like in the next image:

New

Name: Device 1

Type: Weight Indicator

Weight Unit: Kg

Interval: 1000 (ms)

Port: COM1 Baud rates: 9600

Parity: None Data bits: 8

Stop bits: 1 Flow control: None

Digits count: 8 Reverse read: ☐

Decimal: Fixed position 1

Save Cancel

Read the [Maintenance information](#) for more information about troubleshooting the indicator/connection problems.

Operation Setting

In the "Operation" section there are many options that will let you customize the process of creating, editing, deleting, saving the weight tickets.

Operation

- ☒ Use autocomplete in Vehicle field (needs restarting)
- ☐ Support weight discount Discount:
- Enter Weights Manually: Weight:
- Delete Tickets:
- ☐ Copy Quantity value into the Notes field
- ☒ Allow more than one pending ticket for a vehicle
- ☒ don't show confirmation message when inserting new values
- ☐ Show warning message when tare weight equals gross weight
- ☐ Show warning message when gross weight is less than tare weight
- ☐ The second auto weight needs reopening the ticket
- ☐ Prevent zero weights
- ☐ Disable the protection from unstable weight
- ☐ Auto detect Tare/Gross weight
- Weights correction:

We will explain each option in this section.

Use autocomplete in Vehicle field (needs restarting)

By default SmartBridge uses autocomplete in the ticket fields. Some users may don't like to use auto complete when entering the vehicle number in this case just uncheck this option. You can re activate this option when you want. This option needs application restart.

Support weight discount

When activating this option a new field will be visible in the Operation screen to let user enter weight discount manually either as a percent or as a weight value from the net weight.

| | | |
|----------------------|----------------------|----------------------|
| Tare Weight | Date/Time | |
| <input type="text"/> | <input type="text"/> | |
| Gross Weight | Date/Time | |
| <input type="text"/> | <input type="text"/> | |
| Discount(%) | Net Weight | Total Price |
| <input type="text"/> | <input type="text"/> | <input type="text"/> |

Enter Weights Manually

By default SmartBridge doesn't allow enter or edit weights manually but you can change this if you want. Go to "Enter Weights Manually" option and select user's roles that can enter weights manually, you can also choose to allow one weight, Tare only or Gross only or the both.

| | |
|--|---|
| Enter Weights Manually: | Weight: |
| <input type="text" value="Admin and Manager"/> | <input type="text" value="Tare weight only"/> |

You will notice a new switch in the Operation screen, changing this switch to Manual will unlock the weights fields, Tare or Gross or the both, letting user to enter weight values from keyboard. Switching back to Auto will lock the weights fields so they get their values from the connected device only.

The image shows a software interface for entering ticket information. It features a green background with white text and input fields. At the top, there are two search fields: 'Ticket No:' and 'Pending Vehicle No:', both with 'type here ...' placeholder text. Below these is a section titled 'Ticket Details'. It contains several fields: 'Vehicle Number' (123456), 'Driver' (John), 'Material' (Wood), 'Quantity' (20), 'Unit Price' (empty), 'Company' (empty), and 'Warehouse' (empty). There is a 'Notes' field with the text 'Quantity 20'. Below the notes are two checkboxes: 'Gross' and 'Manual', both of which are checked. At the bottom, there are three buttons: 'New' (with a plus icon), 'Save' (with a checkmark icon), and 'Print' (with a printer icon). Below these buttons is a row of eight navigation icons: a square, two left arrows, a single left arrow, a single right arrow, two right arrows, an up arrow, a checkmark, and an X.

Allow more than one pending ticket for a vehicle

Tickets that have one Weight (Gross or Tare) are called “Pending Tickets”. SmartBridge by default allows more than one pending tickets for the same vehicle. If this is not suitable for your business and you want to force closing all the pending tickets of a vehicle before making/inserting a new ticket for it, if this is what you want then uncheck this option. And after this when you try to make a new ticket for a vehicle that has pending ticket, application will remind you to open the pending ticket to fill the remaining weight (this means closing or finishing this pending ticket).

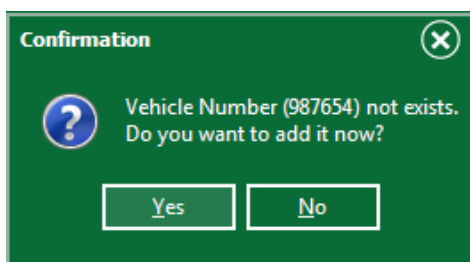

When you press “Yes” the application will open the pending ticket so you can fill/take the remaining weight. If you press the “No” button application will cancel the new ticket.

Remember that you can search for vehicles that have pending ticket by entering the vehicle number in the search box or select it from the drop down list of the “Pending vehicle No:” search field.

A screenshot of a green application form. At the top, there are two search fields: "Ticket No:" with a placeholder "type here ..." and a magnifying glass icon, and "Pending Vehicle No:" with a dropdown menu showing "123456". Below these, there are two more dropdown menus: "Vehicle Number" showing "123456" and "Driver" showing "John". At the bottom, there are three input fields: "Material", "Quantity", and "Unit Price". An orange arrow points to the "Pending Vehicle No:" dropdown menu.

Don't show confirmation message when inserting new value

When activate this option, application will not alert you when you enter new values in the ticket fields (Vehicle Number, Driver, ... etc), application will save the ticket and save the field new value so you can find/select it from that field drop down list. If you want to display alert on ticket fields new values the un check this option, the application now will display alert when user enter new (not saved before) value in ticket fields, like this:

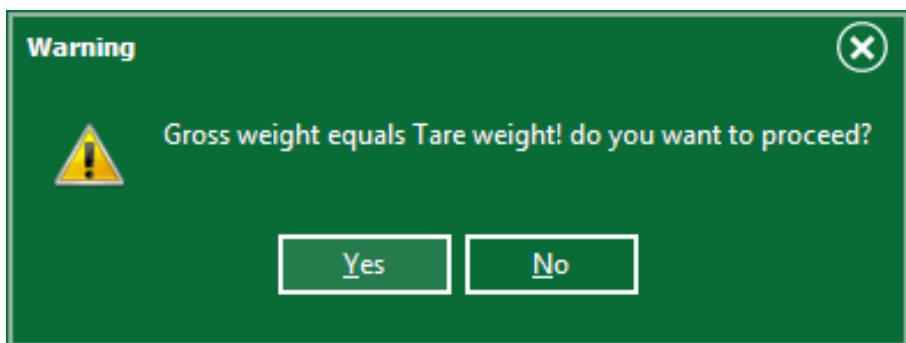

If you press the “Yes” button, then the new value will be saved and you can continue entering/filling the rest of ticket fields, while if you press the “No” button, it will cancel the process.

Note: this option is checked/activated by default.

Show warning message when tare weight equals gross weight

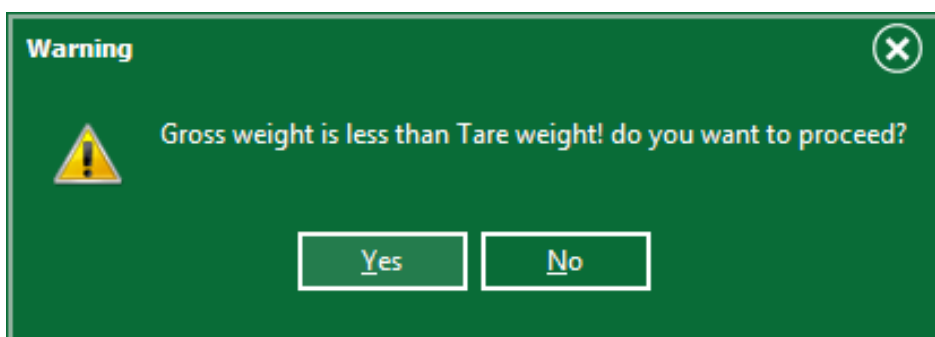

When activate this option, application will alert you before saving tickets that have tare weight equals gross weight, if you press “No”, the application will not save this ticket.

Note: This option/alert doesn't apply to manual weights/tickets.

Show warning message when gross weight is less than tare weight

When activate this option, application will alert you before saving tickets that have gross weight less than tare weight, if you press “No” application will not save this ticket.

Note: This option/alert doesn't apply to manual weights/tickets.

The second auto weight needs reopening the ticket

If you activate/check this option, then you have to reopen ticket (using search or by navigation) to take/save the second weight (tare or gross). This means you can't take/save two weights in ticket in sequential way, instead you need to close the ticket after taking the first weight. e.g. by using the Stop button  and then reopen it again (by search or navigation) to take/save the second weight.

Prevent zero weights

When activate/check this option, the application will prevent saving Zero weight values. The “Save” button turns to disabled state when getting Zero values from the scale device.

Disable the protection from unstable weight

The software has a mechanism to protect user from saving unstable weight read. It will show the unstable sign and the Save button will be disabled.

This is good and required option in most situations. But in some situations it may be hard to get a stable weight read (like in a windy weather conditions). By activating this option you will remove the protection from unstable weight and this will let user choose the right time to save the weight.

Auto detect Tare/Gross Weight

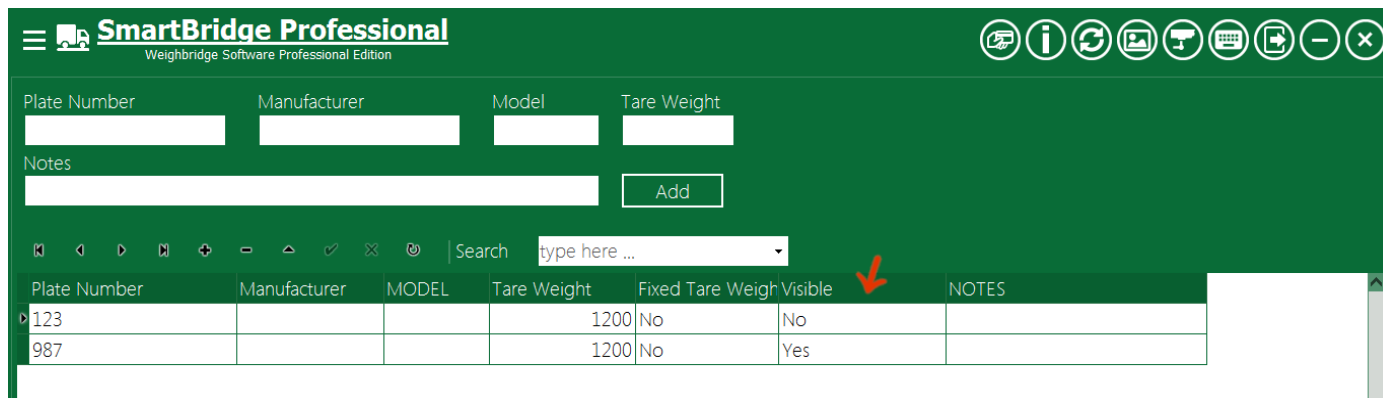

You can use this option to let SmartBridge detects the tare and the gross weight. On the second weight and when the ticket complete, SmartBridge will set the larger weight value in the ticket as if it is the Gross weight, and it will switch the saved tare, gross values in this ticket if necessary. This option has no effect when entering the weights manually.

Lock the new saved tare weights

Enabling this option will prevent the software from updating the saved tare weight of vehicles, so after taking the tare weight of the vehicle for the first time or after entering it from the Vehicles screen it will be locked. Disabling this option will let the software to update the saved tare weight –that appears in the Vehicles screen- each time we save the tare weight in a ticket for this vehicle. As the title says, Disabling or enabling this option will affect the new vehicles only and not the current saved vehicles. The software uses the saved tare value of vehicles to complete tickets if you choose “Tare weight default value” to be “Latest Tare weight of vehicle” as we will explain later.

Allow hiding saved values from the lists in the Operation screen

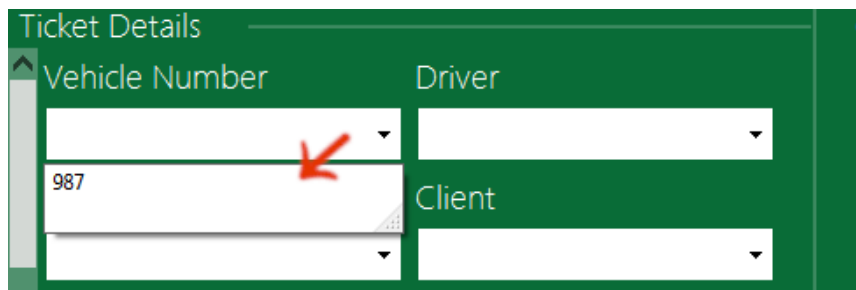

Enabling this option will let the software user to hide any field value from appearing the lists in the Operation screen. A new field will be available in all data grids to give the user the choice to hide specified value from the field list in the Operation screen.

The screenshot shows the SmartBridge Professional interface. At the top, there's a header with the logo and version 'Weighbridge Software Professional Edition'. Below the header, there are input fields for 'Plate Number', 'Manufacturer', 'Model', and 'Tare Weight', along with a 'Notes' field and an 'Add' button. A search bar is also present. Below these, there's a data grid with the following columns: 'Plate Number', 'Manufacturer', 'MODEL', 'Tare Weight', 'Fixed Tare Weigh', 'Visible', and 'NOTES'. A red arrow points to the 'Visible' column header. The grid contains two rows of data:

| Plate Number | Manufacturer | MODEL | Tare Weight | Fixed Tare Weigh | Visible | NOTES |
|--------------|--------------|-------|-------------|------------------|---------|-------|
| 123 | | | 1200 | No | No | |
| 987 | | | 1200 | No | Yes | |

The hidden values will be unlisted in the field list that exists in the Operation screen, and user cannot use these hidden values in the new tickets or to update exiting tickets.

The screenshot shows the 'Ticket Details' form. It has two main sections: 'Vehicle Number' and 'Driver'. The 'Vehicle Number' section has a dropdown menu with the value '987' selected. A red arrow points to this value. The 'Driver' section has a dropdown menu. Below these, there's a 'Client' section with a dropdown menu.

When this option is disabled all values will be available in the Operation screen even if it has the "Visible" field set to No.

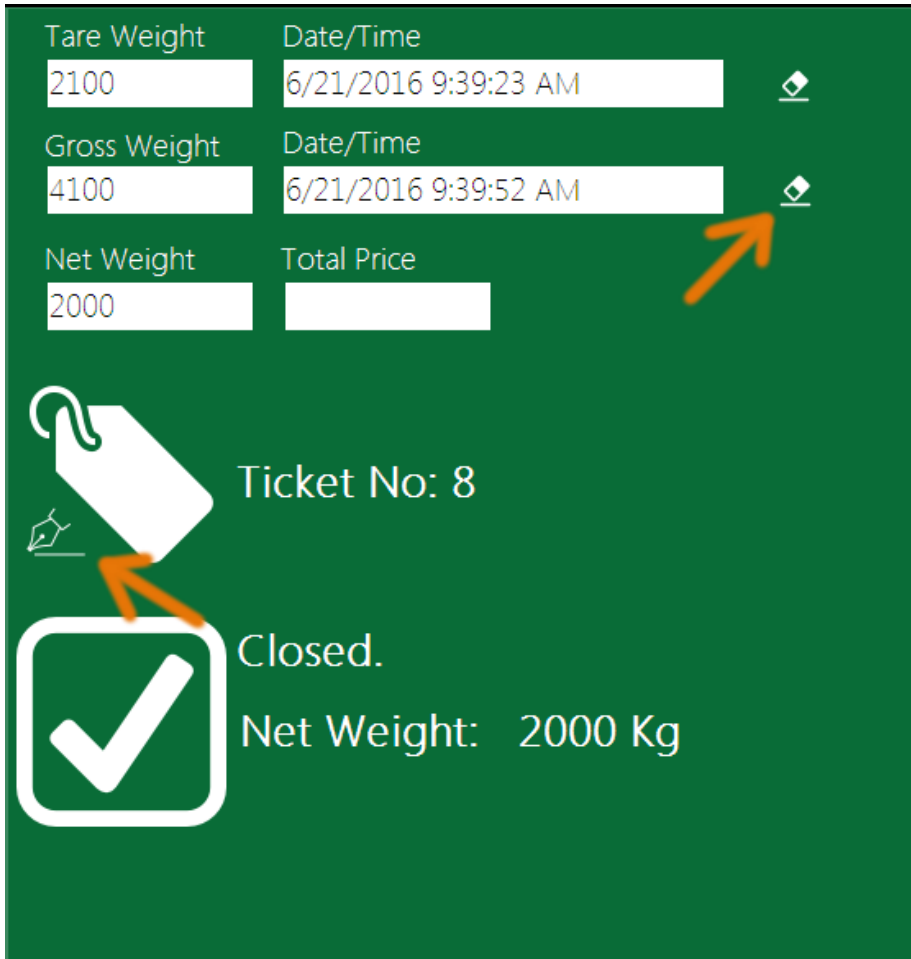

Weights correction

There are four options/choices available for weight correction in SmartBridge. Correction doesn't mean writing/filling weight values manually. Correction means replacing auto/device weight value with another auto/device weight value. Weight correction options/choices are:

- 1- Not Allowed: when selecting this option, the application will not allow weight correction.
- 2- Admin only: when selecting this option, the users with Admin role can correct weight values.
- 3- Admin and Manager: when selecting this option, only users with Admin and Manager Roles can correct weight values.
- 4- All Users: when selecting this option, all users can correct weights values.

When activating weight correction and if you have the required role for correction; you will notice the correction buttons  next to the weight fields, pressing this button will clear the weight field next to it to

let you to take/save another weight value. Tickets that have corrected weights will have  sign/symbol next to the ticket number, to indicate that this ticket has a corrected or a manual weight value.

Weight screen popup menu

SmartBridge can connect and read from multi scale devices/indicators at the same time. User can switch between the connected devices by right click on the weight screen, and from the popup menu user can select the required device or can choose to connect or disconnect device. This popup menu available for users that that have Admin role, if you want to make this popup menu for other users then change this option and select the required roles.

Enter Tare weight from Vehicles screen

With this option you can deny or allow users to insert or edit empty weight for vehicles from the Vehicles screen.

Ignore pending tickets

By default the software shows the count of all pending tickets. You can set the software to ignore pending ticket that older than count of hours. The ignored tickets will not be automatically completed with the messing weight.

Tare weight default value

You can use the “Tare weight default value” to save time, and to save the complete ticket weight (Tare, Gross and Net weight) in one click. The application will get the tare weight default value and then save

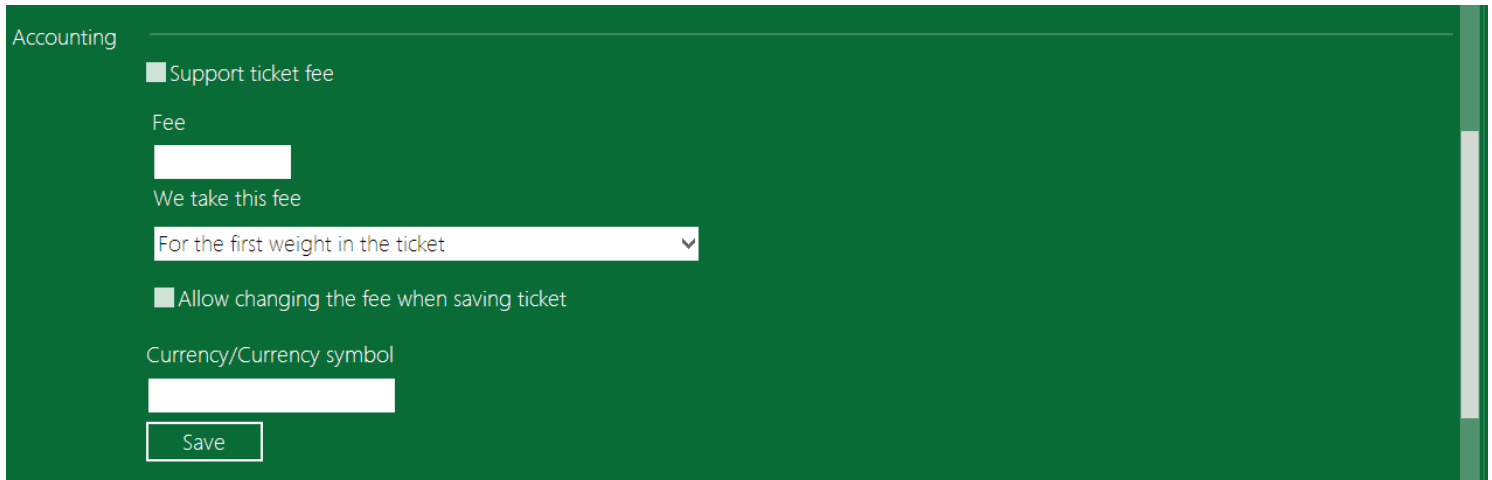

the current weight value as gross weight and calculates the net weight and then save the ticket, all this in one click.

For example, you can set the Tare weight default value to “Latest tare weight value of vehicle”, and by choosing this option the application will save the ticket in one click and will calculate the net weight using the vehicle latest tare weight, you need to save the tare weight of vehicle one time at least, and the application will use this tare weight in the upcoming tickets. You can see the vehicles latest tare weight value from the “Vehicles” screen. The Admin can allow editing, or saving the tare weight from the Vehicle screen.

Accounting setting

In accounting setting section you can add support for ticket fee if you want the application to save/calc ticket fees. Don't forget to press the "Save" button to save this section settings changes.

The main screen of the SmartBridge software features a blue header with the logo and navigation icons. Below the header, a black bar displays the time (08:48) and date (22-05-2016) in red, along with a large red digital scale display showing 0.0 Kg. The main area is divided into two columns. The left column contains input fields for Ticket No., Pending Vehicle No., Ticket Details (Vehicle Number, Driver, Material, Quantity, Unit Price, Company, Warehouse), and Notes. The right column contains input fields for Tare Weight, Date/Time, Gross Weight, Date/Time, Net Weight, and Total Price. At the bottom, there are buttons for New, Save, and Print, along with a set of navigation arrows.

Use bold font in the main screen

If you want the field's font to be bold in the operation screen; you can go the Options screen, and from the Application section Check "Use bold font in the main screen".

Change application language

To select SmartBridge interface language; go the Options screen and from the Application section select language you want and press Apply button.

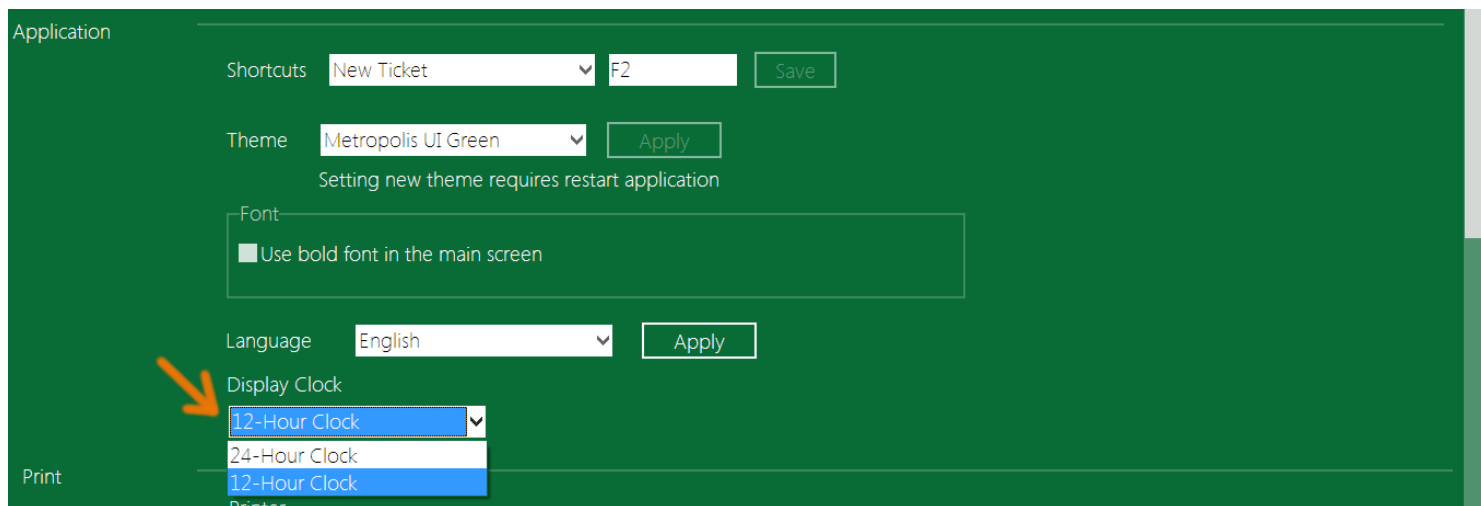

The Options screen - Application section is shown with a green background. It includes fields for Shortcuts (New Ticket, F2), Theme (Metropolis UI Green), and Font. The Font section has a checkbox for "Use bold font in the main screen" and a dropdown menu for Language (العربية). Arrows point to the Language dropdown and the Apply button.

You need to restart the application to apply changes.

Change Display Clock Format

User can select the format for the clock that appears in the Operation screen between 24-Hour format and 12-Hour format.

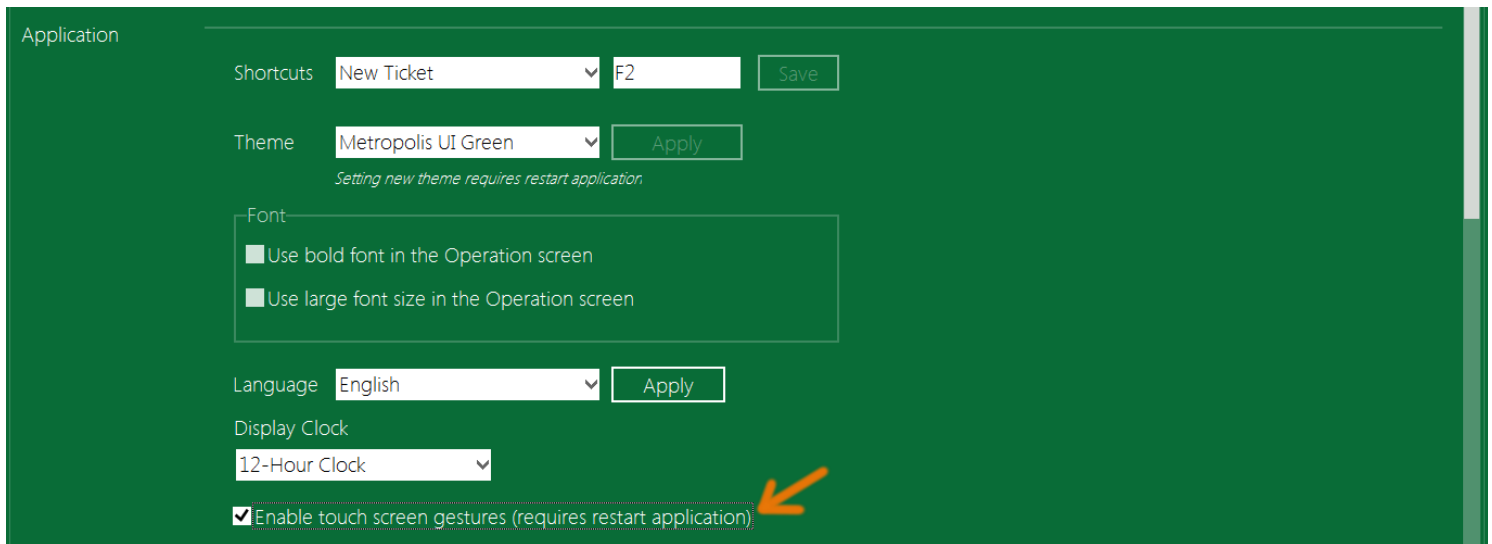

This option applies only on the clock that appears in the Operation screen and doesn't affect the date-time format in the application.

Enable touch screen gestures

To enable touch screen gestures, go to the Options screen and from the Application section check the option "Enable touch screen gestures" and restart the application.

Design Ticket Template

SmartBridge has basic print template for weight tickets “Basic Template” you can use this built-in template, or you can design your own template. You can use external application [TicketDesigner](#) for more professional template (tables, lines, images, ...), you can download this application TicketDesigner from our site for free, you can also design ticket template from inside SmartBridge, To design ticket print template from SmartBridge: go to the Options screen.

In the Options screen go to the Print section and select new ticket template.

The Ticket template design window will pop up. In this window you can find all ticket fields, you can choose what fields to print on the weight ticket and where you want these fields to be printed, you can use the vertical and horizontal rulers to place the fields in its right places using the mouse to drag fields values/titles where you want.

Ticket template design

| | | | | |
|---------------------|-----------------|--------------------------|---------------------|--|
| | <Owner Name> | | | |
| | <Owner Address> | | | |
| Ticket No | <Ticket No> | Vehicle Number | <Vehicle Number> | |
| Driver | <Driver> | Material | <Material> | |
| Warehouse | <Warehouse> | Company | <Company> | |

| Unit Price | <Unit Price> | Total Price | <Total Price> | |
| Fee | <Fee> | Username | <Username> | |
| Notes | <Notes> | | | |

The text in bold is the field title which you can change it, the text between <> marks is placeholder for field value. Any field title or field value you don't want to print it on the weight ticket, just select it and press Delete button on keyboard. When selecting a field title or value you can change its diminutions by dragging its edges. Or change its font by double click on it, or right click and select Font from the popup menu.

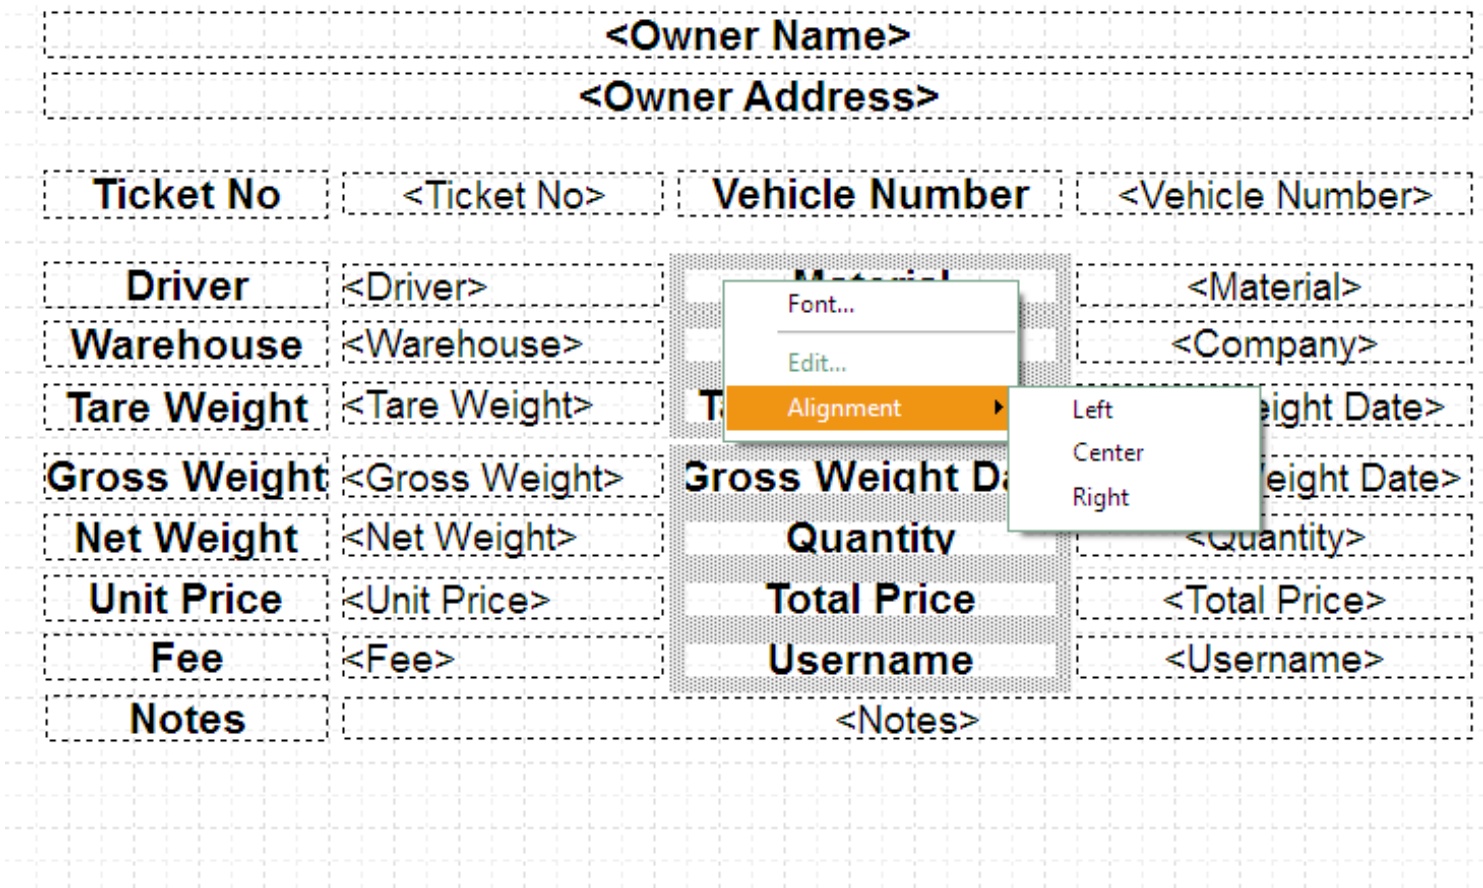

Notes <Notes>

You can select multi fields by holding the Shift key on keyboard and then click on fields you want to select.

You can change field title by right click on field title and select "Edit..." .

Also you can change fields title/value alignment by right click on field(s) and select Alignment you want.

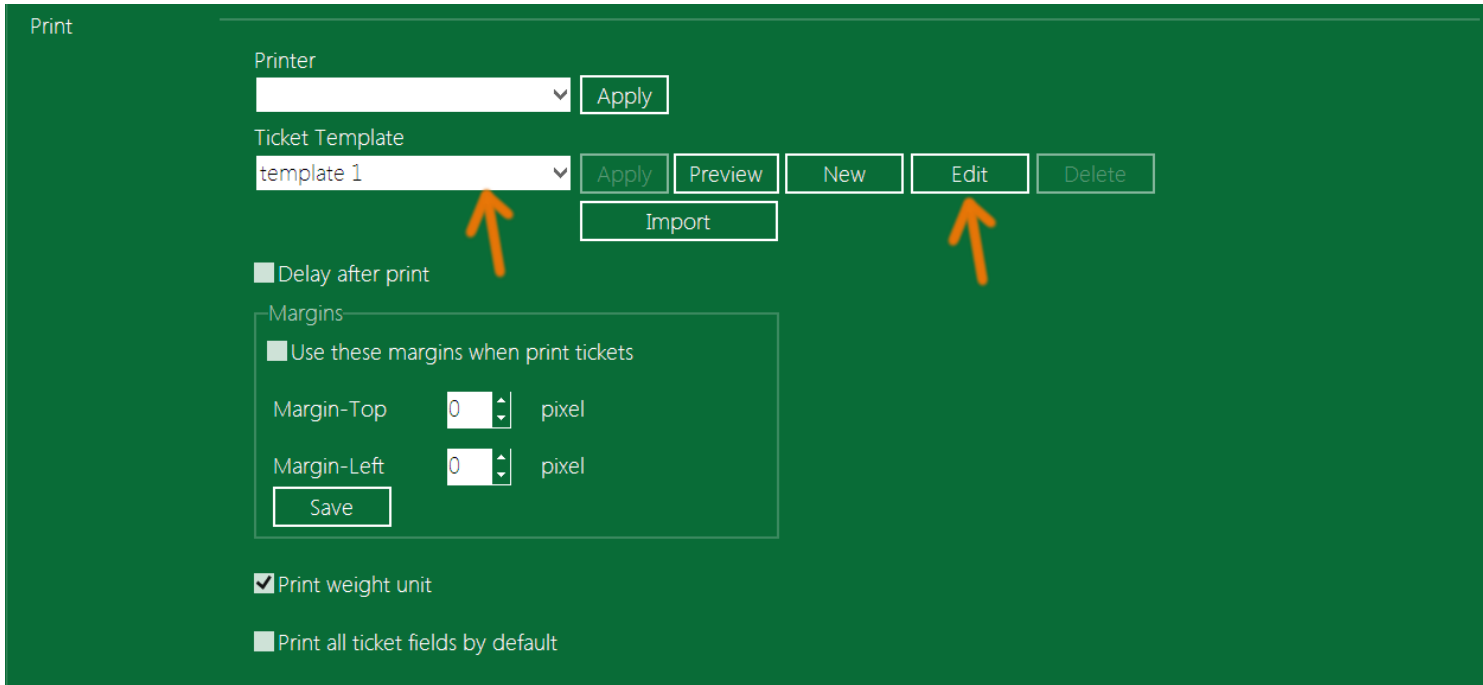

You can print test ticket to make sure from your design, to print a test ticket just press the print  button.

When finishing your design you can save it by press the Save button, give your template a name and press Ok.

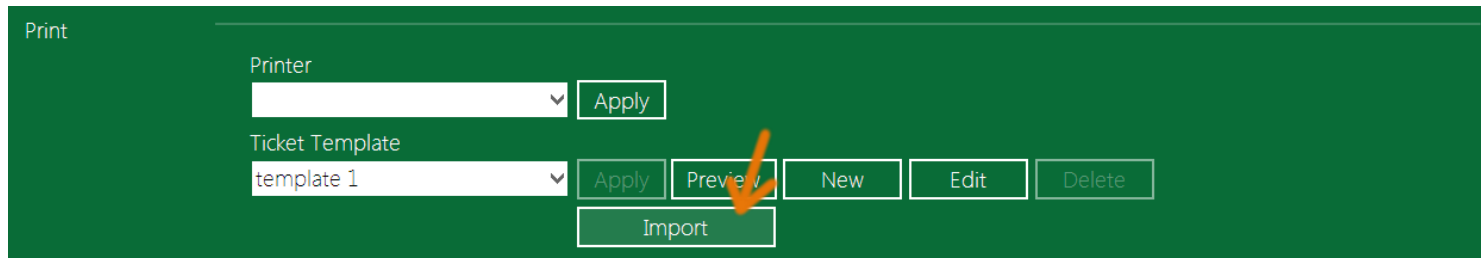

The new template will appear in the templates list in the Options screen. You can select it and press Apply button. Then this template will be used to print the weight tickets. You can also edit template design at any time by selecting the template and pressing the Edit button.

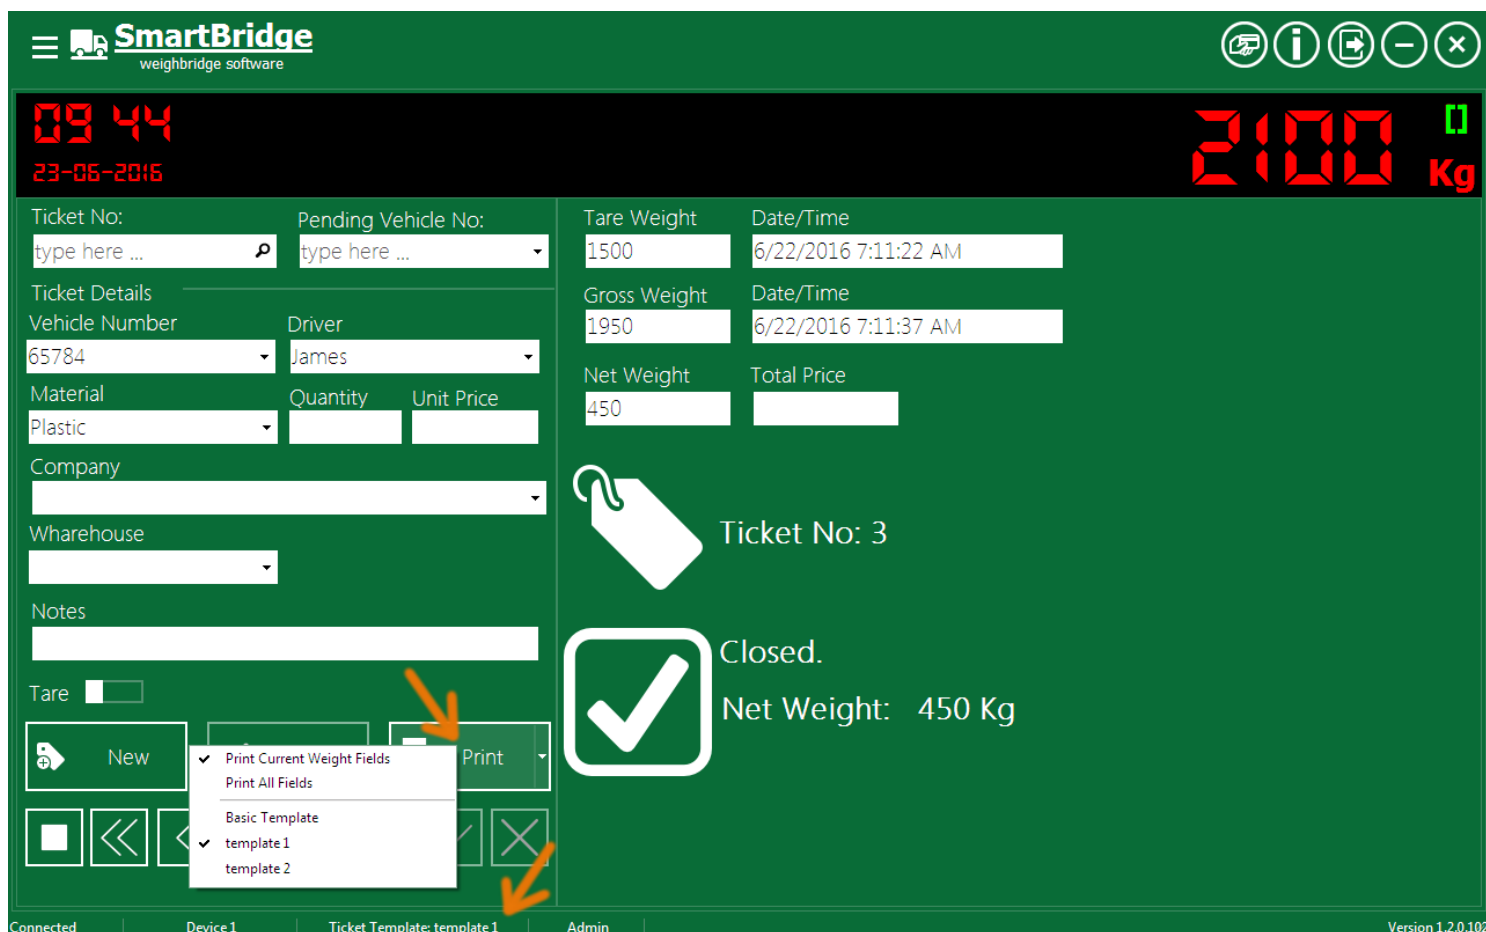

In the Ticket template design window you can export your design to an external file; this will help if you want to use this design in another computer. To export template design press the export  button.

To import template design from file; go to the Options screen and from the Print section select Import template. Navigate to ticket file you want and press open you should see the ticket name in the template list.

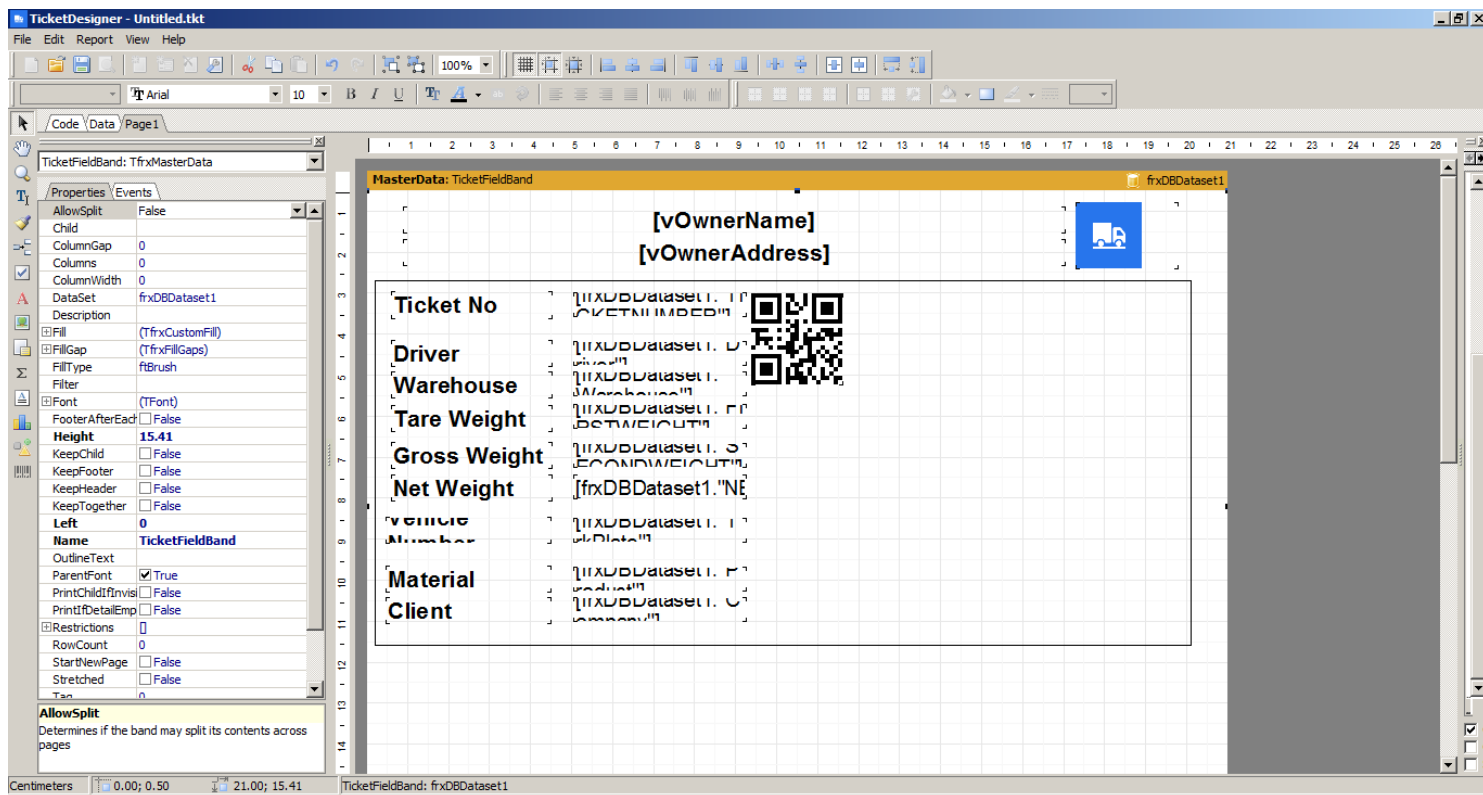

You can switch between ticket templates quickly from the operation screen by right click on the Print button and select the ticket template you want. The current used template will be displayed in the status bar.

Design ticket template using TicketDesigner

TicketDesigner is an external tool to help you design the weight ticket printing templates. It has all the options needed to design any printing template you need. You can add images, tables, barcodes, shapes ...etc. this tool has its own installer which you can download from the SmartBridge product page. TicketDesigner has its own User's manual which contains all the information needed to use this tool.

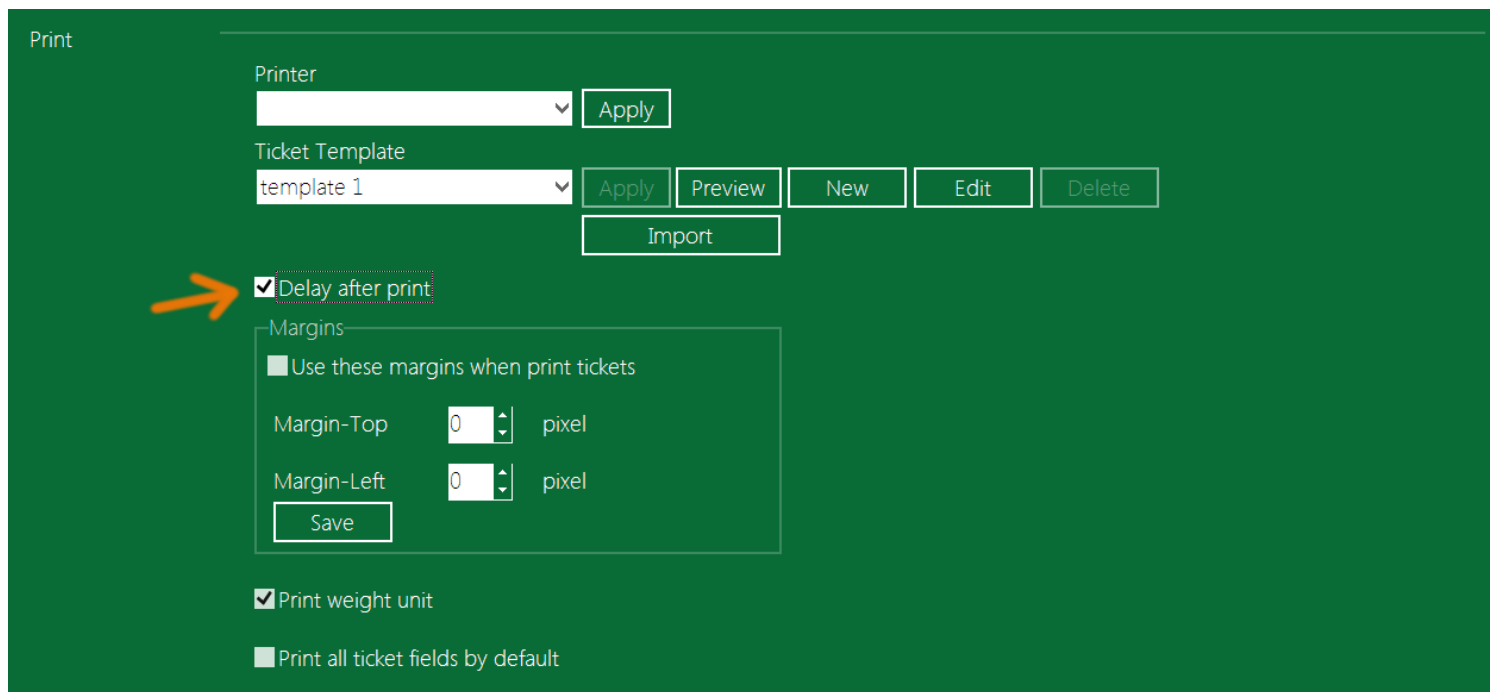

Print directly (don't show print dialog)

By default the application will print tickets directly with showing the print options dialog, if you want to show the print dialog options when printing tickets then unselect this option.

Printing delay

To prevent sending more than one print command to the selected printer by accident, you can put a short delay after each print command; the Print button will be disabled in this delay. To make/active this delay, go to the Options screen and check "Delay after print" option.

Print weight unit

If you want to print the weight unit next to each weight value in the weight tickets; go to the Options screen and from the Print section check “Print weight unit”; then every weight value in ticket will be printed with unit suffix like this (2000 kg).

Print all ticket fields by default

By default SmartBridge print only fields suitable for the current weight. E.g. on Tare weight it will not print the Material or Quantity fields (because the vehicle should be empty). User can choose to print all ticket fields from the operation screen by right click on the Print button and select “Print All”.

If you want SmartBridge to print all ticket fields by default, go to the Options screen and from the Print section check “Print all ticket fields by default” option; in the Operation screen you will notice the Print button caption turns to “Print All”.

On the second weight print values only

When activating this option, the application on the second weight will hide any objects like images, lines, titles ...etc on the ticket template and print the values only.

Repeat print ticket

If you want to repeat printing ticket check the option “Repeat print ticket” and set how many times you want to repeat the print.

Weight Options

The Options screen contains a section for the weight options, you can choose the default first weight in the ticket; you can choose the first weight in the ticket to be either the tare or the gross weight..

Weight

Default weight
Tare Weight ▼ Apply

Zero reference
10 Apply

Type limitation
Unspecified ▼

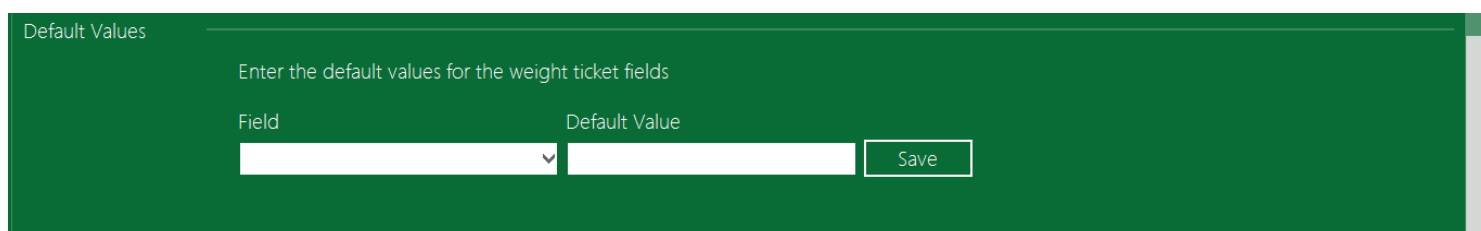

In the Operation screen, the user still can select which weight to be save in the ticket by switching the weight type switch  .

In the Weight section also you can set the Zero reference, this value will be used in the professional edition to control the sensitivity of the sound alarms and the USB relay device commands in addition to other places where this value is used, the software will consider any value equal and below the zero reference as a zero.

In this section also you can set the weight type limitation of the host pc/station. Leave this value to Unspecified will let the software to save Tare and Gross weight on this PC, for example if you set the type limitation to “Gross weight only” then user cannot use the hosted pc to save the tare values on the tickets he can only save the gross value on this computer, if he try to save the tare weight the Save button will be disabled. This option has no effect if user switches to manual weighing.

Default values

You can assign default values for all ticket fields, the weight ticket fields will be filled with the default values when user create new ticket. User can change these values inside ticket before saving it.

Default Values

Enter the default values for the weight ticket fields

Operation

Operation screen

This is the main screen in the application and the next images shows its main parts.

The screenshot shows the SmartBridge Operation screen with various input fields and buttons. The interface is green with white text and red digital displays. Blue arrows point from labels to specific parts of the screen.

Search area: Points to the top left area containing the time **03:40** and date **27-05-2016**.

Application Control Buttons: Points to the top right area containing icons for help, info, search, and window management.

weight: Points to the large red digital display showing **2100 Kg**.

Weight fields: Points to the right side of the central form containing fields for Tare Weight, Date/Time, Gross Weight, Date/Time, Net Weight, and Total Price.

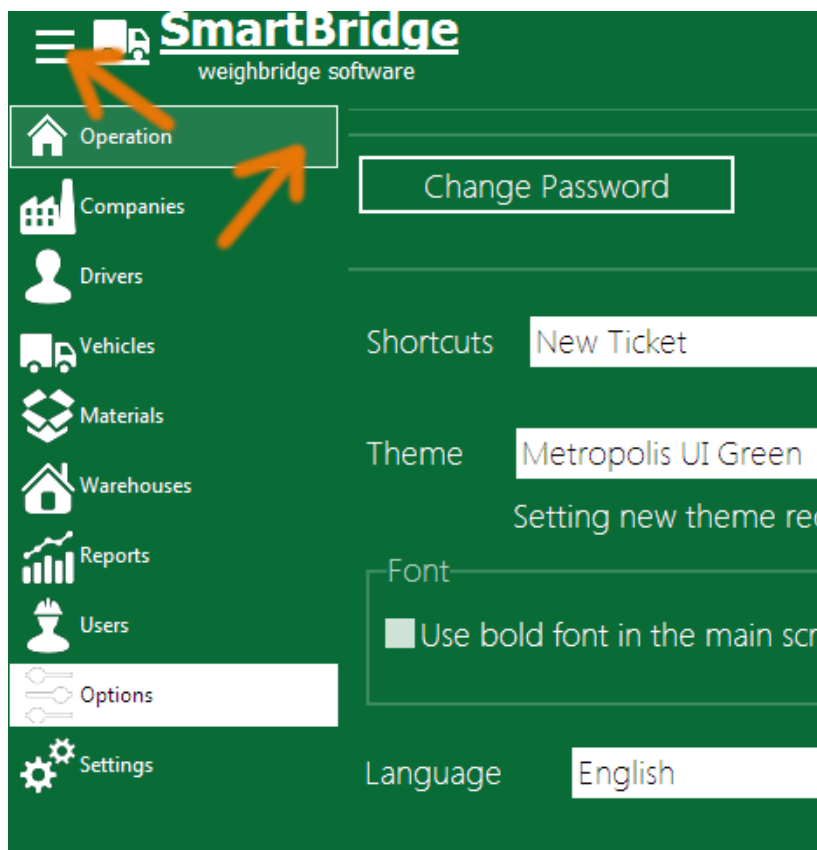

Ticket fields: Points to the left side of the central form containing fields for Ticket No., Pending Vehicle No., Vehicle Number, Driver, Material, Quantity, Unit Price, Company, Warehouse, and Notes.

Ticket control buttons: Points to the bottom left area containing buttons for New, Save, and Print.

navigation buttons: Points to the bottom left area containing a set of navigation icons (back, forward, etc.).

At the bottom of the screen, there is a status bar with the following text: **Connected**, **Device1**, **Ticket Template: Basic Template**, **Admin**, and **Version 1.2.0.99**.

If you were in deferent application screen like Settings, Options, or Reports ...etc and want to go back to the Operation screen, press the Application menu and select Operation.

Creating a new weight ticket

To create a new weight ticket, go the Operation screen and press the “New” button. Fill all the required fields in the ticket -you can set the required fields in the [Operation Settings](#)- and then if there is stable read/value from the scale/indicator device, the “Save” will be enabled letting you to save the current weight value in this ticket as a tare o a gross weight as you set the weight switch.

In the ticket fields, you can enter the field value directly if it’s a new value (not saved in any ticket before) or you can select it as you type from the field drop down search list.

The image shows a "Ticket Details" form. It has a green header with the title "Ticket Details". Below the header, there are two dropdown menus: "Vehicle Number" and "Driver". The "Vehicle Number" dropdown is open, showing a list of numbers: 12345, 65784, and 9876. To the right of the "Driver" dropdown, there are two input fields: "Quantity" and "Unit Price". At the bottom, there is a "Company" dropdown menu.

The sign of the stable value/read from the scale device/indicator is the green square next to the weight value.

If there is unstable weight read/value from the scale device (or a negative weight value) you will see unstable weight sign as animated red square.

To choose the weight kind (tare or gross weight) you can change the weight kind switch state.

Or you can just put the mouse in the Tare or Gross filed (the one you want to save it) and press Enter or "Save" button.

| | |

Net Weight: Total Price:

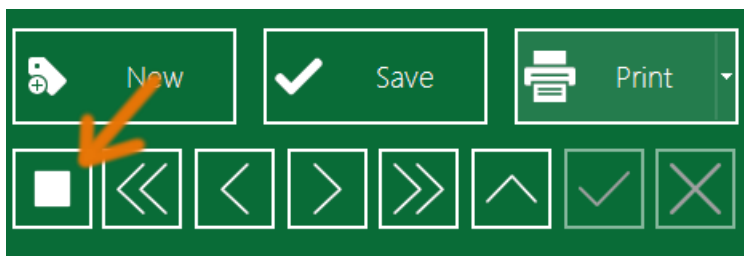

Ticket No: 1

Waiting for gross weight ...

After saving a ticket, the “Print” button will be enabled and focused so if you press the Enter button on keyboard one more time the ticket will be printed using the [selected ticket template](#) and the [selected printer](#). The tickets with one weight are called “pending tickets”, there is indicator of the pending tickets count in the upper left corner next to the clock. This indicator will disappear if there are no pending tickets.

After saving and printing the ticket you can either make a new ticket by pressing the “New” button again or empty/clean the work area (empty ticket fields) by pressing the “Stop” button.

You can search for vehicles that have pending ticket(s) by writing vehicle number in the “Pending vehicle No:” field and pressing Enter, or just select it from the drop down list of the field “Pending vehicle No”; the application will open and show the last pending ticket of this vehicle. You can also search for ticket number directly by writing the ticket number in the “Ticket No” search field and pressing the Enter button on keyboard.

When opening a pending ticket (to take/save the second weight) the second weight should be different from the first one so you have a net weight as a result. The application will give you hint about the Net weight by displaying a calculated value in weight display screen you can check it before saving.

You can take/save the second weight by pressing the “Save” button. The ticket status will be updated from “Pending” to “Closed” and the Net weight will be calculated and saved in this ticket.

You can search for ticket number (pending or closed ticket) by writing this number in the search box and press the Enter button, also you can search for vehicles that have pending tickets by writing vehicle number in the “Pending Vehicle No” field and pressing Enter button.

| | |
|--|--|
| Ticket No: | Pending Vehicle No: |
| <input type="text" value="type here ..."/> | <input type="text" value="type here ..."/> |

During the creating ticket process (after pressing New button and before pressing Save button) the search fields turn to disabled state, so you cannot write inside these fields or do search during the creating ticket process, you have to end the process either by saving the ticket (pressing Save button) or by canceling the insert process by pressing the Stop button . Also you can press the Search shortcut (F3 by default) this will cancel the creating ticket process and switch to the search mode/fields.

Edit weight ticket

SmartBridge users (with Admin or User role) can edit some fields in pending tickets. Closed tickets fields cannot be edited, the weight fields can be corrected –even in the closed tickets- if Admin choose to activate this option through the [Operation Settings](#). You can edit all pending tickets fields except weights (Tare, Gross) fields and the Vehicle Number field. To edit a pending ticket, open this ticket using search or the navigation buttons and then press the Edit button in the [navigation buttons](#) bar.

 Waiting for gross weight ...

After editing the pending ticket press the Apply Changes button in the navigation buttons bar.

While edit a pending ticket if you want to cancel this edit at any time, just press the Stop button  in the [navigation buttons](#) bar, this will cancel the edit process and reverse changes you made.

Correct weight value

SmartBridge by default doesn't allow changing the weight values in ticket. In [Operation Setting](#) you can change this setting to allow Edit/Correct weight values, you can make this option available only for users that have Admin role or for Admin and Manager role or for all users.

You can see Correction buttons  next to the weight fields, pressing correction button will erase/empty the current weight and date values, this will let you take/save new value in this empty field. Before taking new value you can cancel the correction process and go back to the old weight value by pressing the Stop button  in the [navigation buttons](#) bar.

An orange arrow points to a checkmark icon in a box, which is part of the status update process.

Enter weight value manually

SmartBridge by default doesn't allow enter weight values manually (from keyboard) but, in the [Operation Settings](#) you can change this to allow users with selected role to enter weight values manually. After activating the option "Enter weights manually", users that have the selected role will see weight type switch in the Operation screen by changing this switch to "Manual", application will let you write weight values from keyboard.

 Stop button, use this button to cancel any ongoing process like viewing, creating, editing or correcting tickets. Consider it as an Escape button or as Undo button (Ctrl+Z) in some cases. Pressing this button will cancel the ongoing process and switch to the search mode.

 First ticket, press this button to view the first saved ticket.

 Previous ticket, press this button to view the previous ticket, you can also press PageDown key on keyboard as a shortcut.

 Next ticket, press this button to view the next ticket, you can also press PageUp key on keyboard as a shortcut.

 Last ticket, press this button to view the last saved ticket.

 Edit pending ticket, use this to edit/correct some fields in the pending tickets, this doesn't include the weight values.

 Apply changes, use to apply changes you made when editing a pending ticket.

 Delete ticket, use it to delete tickets.

The Reports screen

SmartBridge gives you options to search in the saved ticket and to print/view a work report through the Reports screen. To open the Reports screen go the application menu and select Reports.

The Reports screen has many search options. You can view the search result on screen or print it as Work report or export it to Excel where you can customize the result in the way you want. The screen has two sections the top section in which you can search and display weight tickets each ticket in one record, and the bottom section –you need to scroll down to see it- which contains the summary report search option.

Set the Date fields (From Date, To Date) and then fill in the search fields, then press the Search button if you want to view the search result onscreen, or press “Print Preview” button to preview the work report, or you can press “Export To Excel” to export the search result to Excel.

The Users screen

SamrtBridge support multi users and multi roles, only application administrators (user with Admin role) can access the Users screen, from this screen you can manage the application user accounts.

Add new user

Form the Users screen you can add new user (application user). Fill the fields with the user information you want, select roles you want to give to this user and press the Add button.

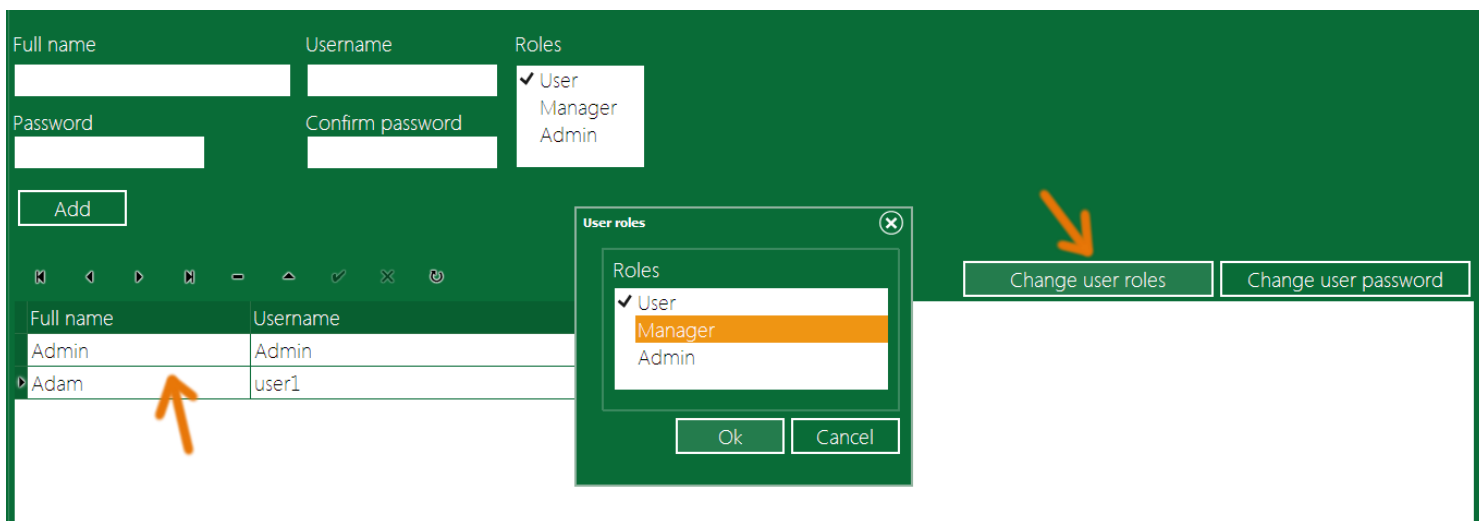

The screenshot shows the 'Add' button highlighted with an orange arrow. The 'Roles' dropdown menu is open, showing 'User', 'Manager', and 'Admin' with 'User' selected. Another orange arrow points to the 'Add' button.

| Full name | Username | Roles |
|-----------|----------|------------|
| Admin | Admin | User,Admin |

Change user roles

As an Admin you can change other users roles, from the Users screen select user then press “Change user roles” and from the roles dialog select the roles you want then press Ok.

The screenshot shows the 'Change user roles' button highlighted with an orange arrow. The 'User roles' dialog is open, showing 'User', 'Manager', and 'Admin' with 'Manager' selected. Another orange arrow points to the 'Change user roles' button.

| Full name | Username |
|-----------|----------|
| Admin | Admin |
| Adam | user1 |

Change user password

As an Admin you can change other users passwords, from the Users screen select user and press “Change user password” and in the password dialog enter the new password.

The screenshot shows the SmartBridge Users management interface. On the left, there are input fields for 'Full name', 'Username', 'Password', and 'Confirm password', along with an 'Add' button. Below these is a table of users:

| Full name | Username |
|-----------|----------|
| Admin | Admin |
| Adam | user1 |

To the right of the table is a 'Roles' dropdown menu with options: User (checked), Manager, and Admin. Further right are two buttons: 'Change user roles' and 'Change user password'. The 'Change user password' button is highlighted with an orange arrow. A modal dialog box titled 'Password' is open in the center, with an orange arrow pointing to its title bar. The dialog contains fields for 'New password' and 'Confirm new password', both masked with dots, and 'Ok' and 'Cancel' buttons at the bottom.

User logout

In SmartBridge users can logout/login without restarting the application. To switch the current logged-in user, press the Logout button in the application buttons, this will log current user off and display the login screen letting other user(s) to log in. the current user username will be displayed in the status bar.

As Admin you can drop users if they didn't save any ticket to drop user go to the Users screen select

100%

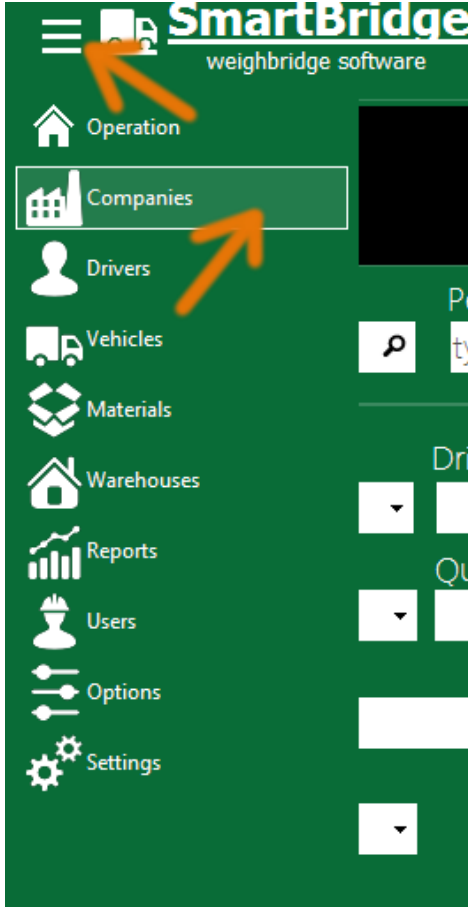

From Users screen you can change user information (Full Name, username), select user and change

The screenshot shows a database application interface. At the top, there is a toolbar with icons for navigation (back, forward, search, etc.) and a table of users. The table has three columns: 'Full name', 'Username', and 'Roles'. There are two rows of data. Orange arrows point to the 'Full name' and 'Username' columns. To the right of the table are two buttons: 'Change user roles' and 'Change user password'.

| Full name | Username | Roles |
|-----------|----------|-------------|
| Admin | Admin | User, Admin |
| Mr. Adam | u1 | User |

The Companies screen

To view Companies screen go to the Application menu and select Companies.

In the Operation screen any value entered in the Company field will be saved automatically into the companies table, you can view this table in the Companies screen. In the Companies screen you can insert, delete or edit company's information. The Code field could be used to synchronize Companies table with data exported from external application.

Import data utility

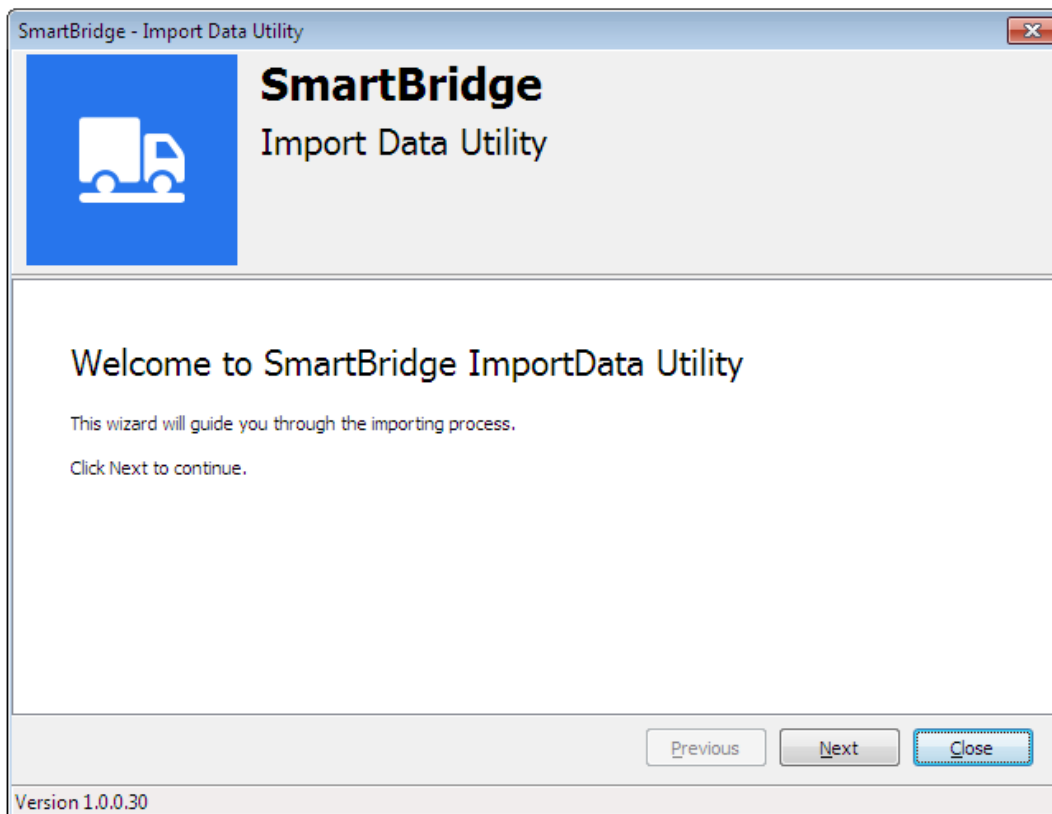

ImportUtility is an external application to import data from Excel files into SmartBridge database. You can start this utility from start menu.

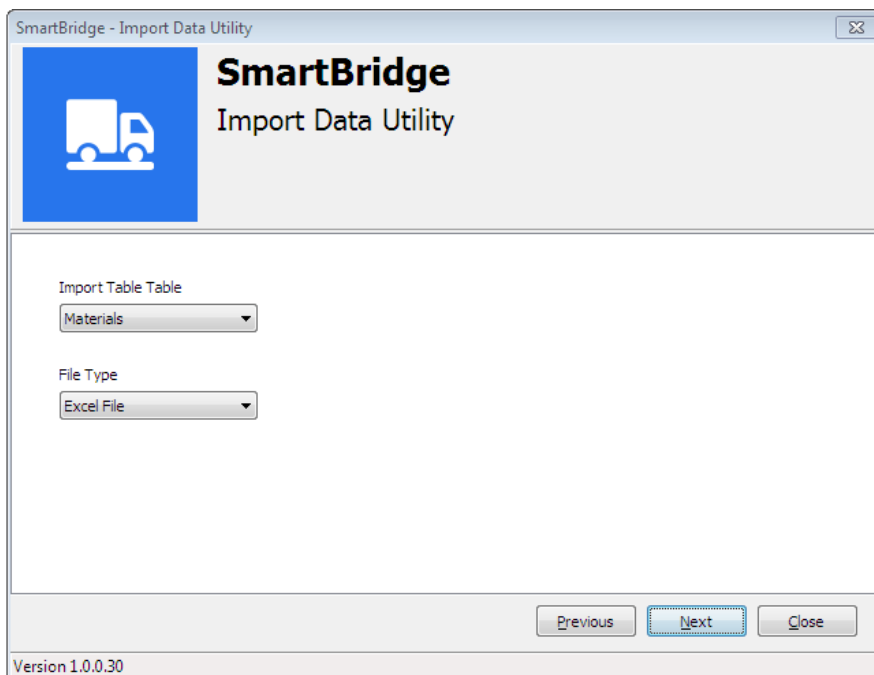

In the login window enter user name and password for any SmartBridge user with “Admin” role.

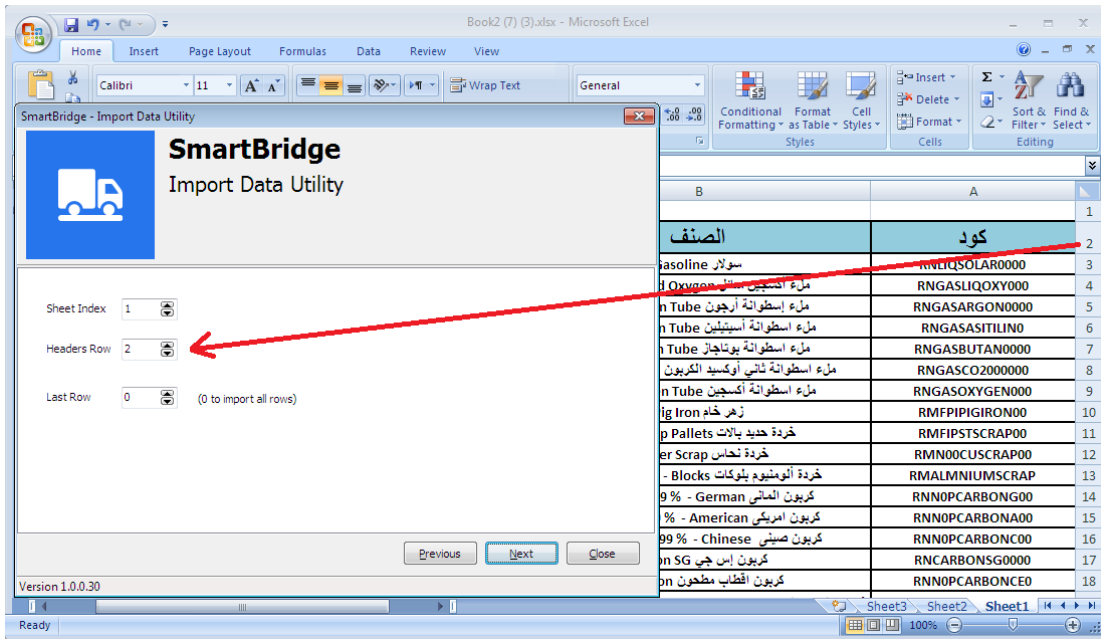

After logged in you should see the welcome page.

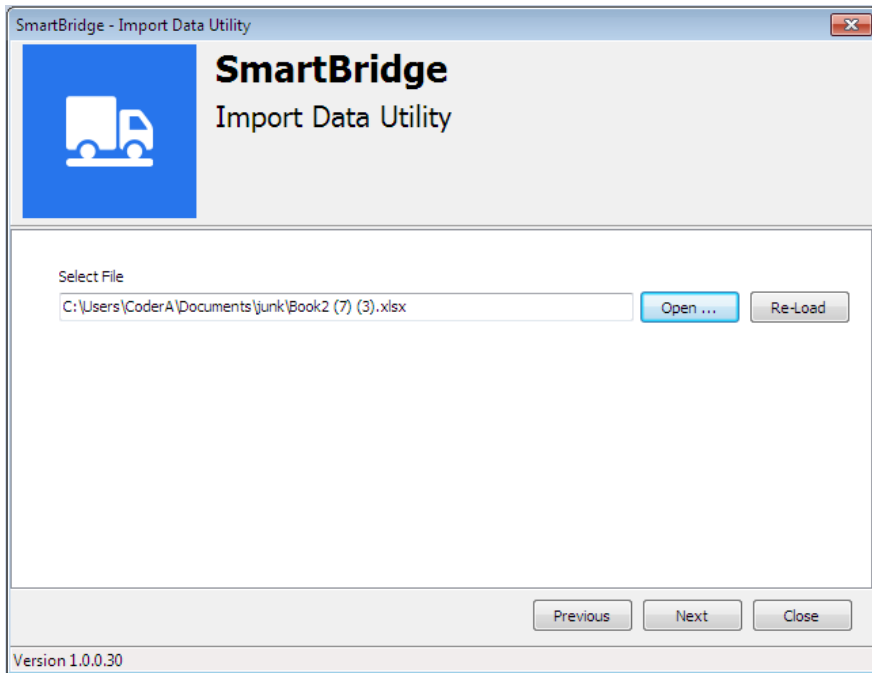

In the next page select the table you want to import and the file type.

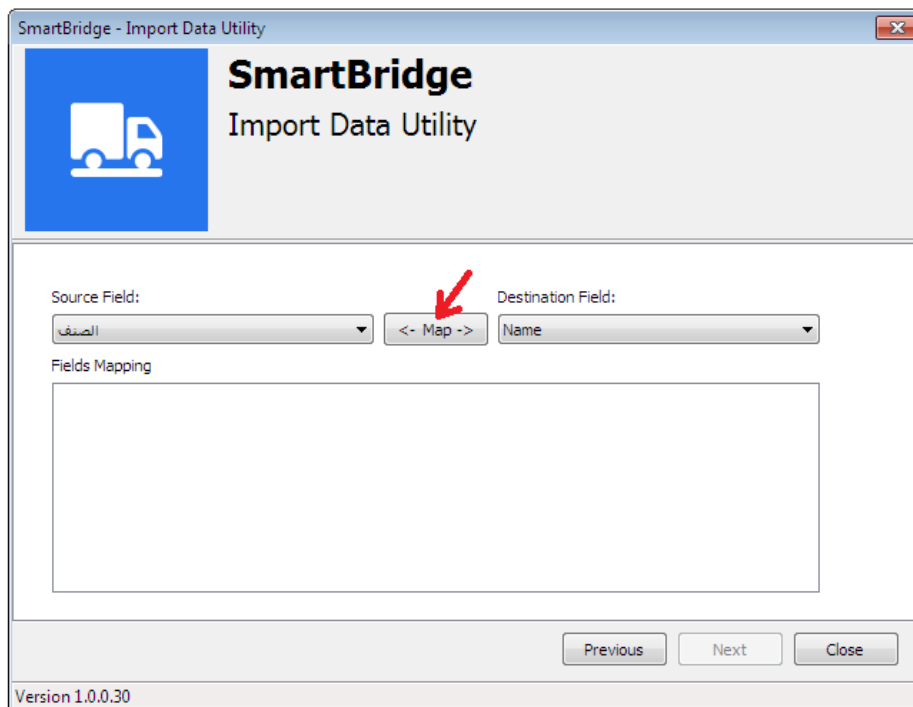

In the next page set the sheet index that contains the data in the Excel file and the row that contains the columns titles and how many rows you want to import. This next image describes how to do this.

In the next wizard page select the file that contains the data.

In the next page set the fields/columns mapping.

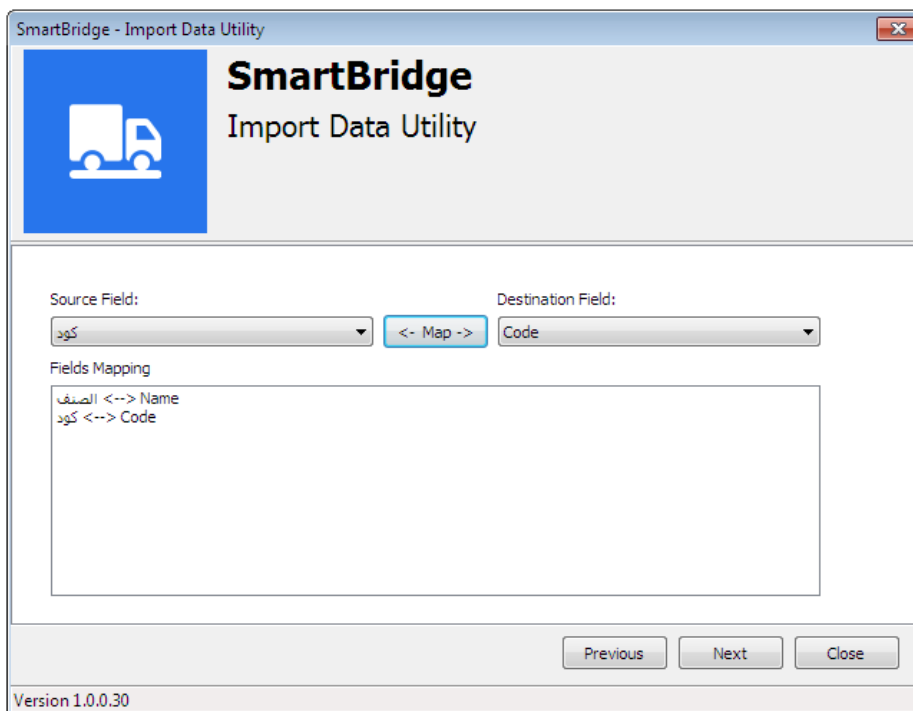

SmartBridge - Import Data Utility

SmartBridge
Import Data Utility

Source Field: Destination Field:

Fields Mapping

Version 1.0.0.30

SmartBridge - Import Data Utility

SmartBridge
Import Data Utility

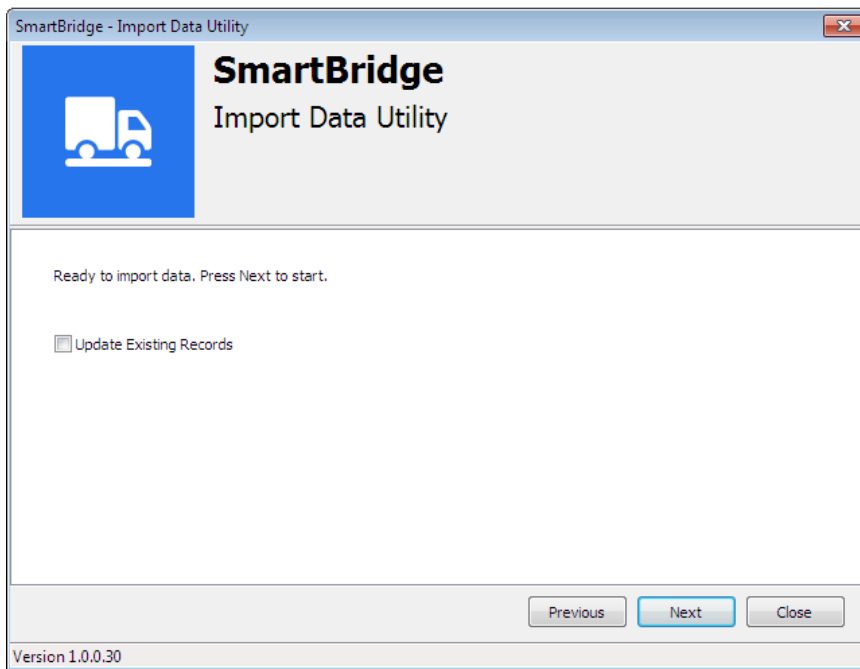

Source Field: Destination Field:

Fields Mapping

الصف <-> Name
كود <-> Code

Version 1.0.0.30

Now the wizard is ready to import the data. In the next page you can choose if you want to update the existing records/data. This wizard will use field “Code” to determine if the record exists.

Press “Next” button to start the import data process. The log will show any error during the process.

Maintenance information

In this section we will cover some maintenance information.

The weight display in the Operation screen shows the weight value as received from the scale indicator and also it can give hints about the problems.

Black screen:

Black screen indicates that the program is not connected to any weight device/source, that is because you did not add any weight device/source yet (like the situation after you install the program) or because you disconnected the device by clicking on the “Disconnect” button.

Red Dashes

This means the program is not receiving a valid weight value from the weight device/source. The problem could be in the connection settings inside the application or in the connection cable or in the weight device itself. Make sure you are using the correct connection settings for the connected weight device/source. Check the connection cable. Check the weight device/source. Some weight indicators have transmission modes; make sure to set it to a continuous mode.

Flickering

When [adding a new device](#) you may notice some flickering in the weight value that is shown in the Operation screen; this means the synchronization process is too fast for this device/source. That is because you are using a very low “Interval” value for this device/source; try to set the “Interval” field to a higher value in the weight device/source settings.

Edit

Name: Device 1

Type: Weight Indicator

Weight Unit: Kg

Interval: 300 (ms)

Port: COM1 Baud rates: 9600

Parity: None Data bits: 8

Stop bits: 1 Flow control: None

Digits count: 8 Reverse read: ☐

Decimal: No decimal point

Save Cancel

Note: a higher “Interval” values mean slow synchronization (delay) between the weight device/source and SmartBridge.

The weight value on SmartBridge screen does not match the weight value on the weight device/source

This indicates that the connection settings are not suitable for this weight device; try change the weight device/source connection settings from the “Settings” screen. In some cases this may also be caused by a hardware failure in the weight indicator.

Change the database path

The ability to change the database path will give you option to create more than one database and to switch between these databases easily. This option is available only on registered version.

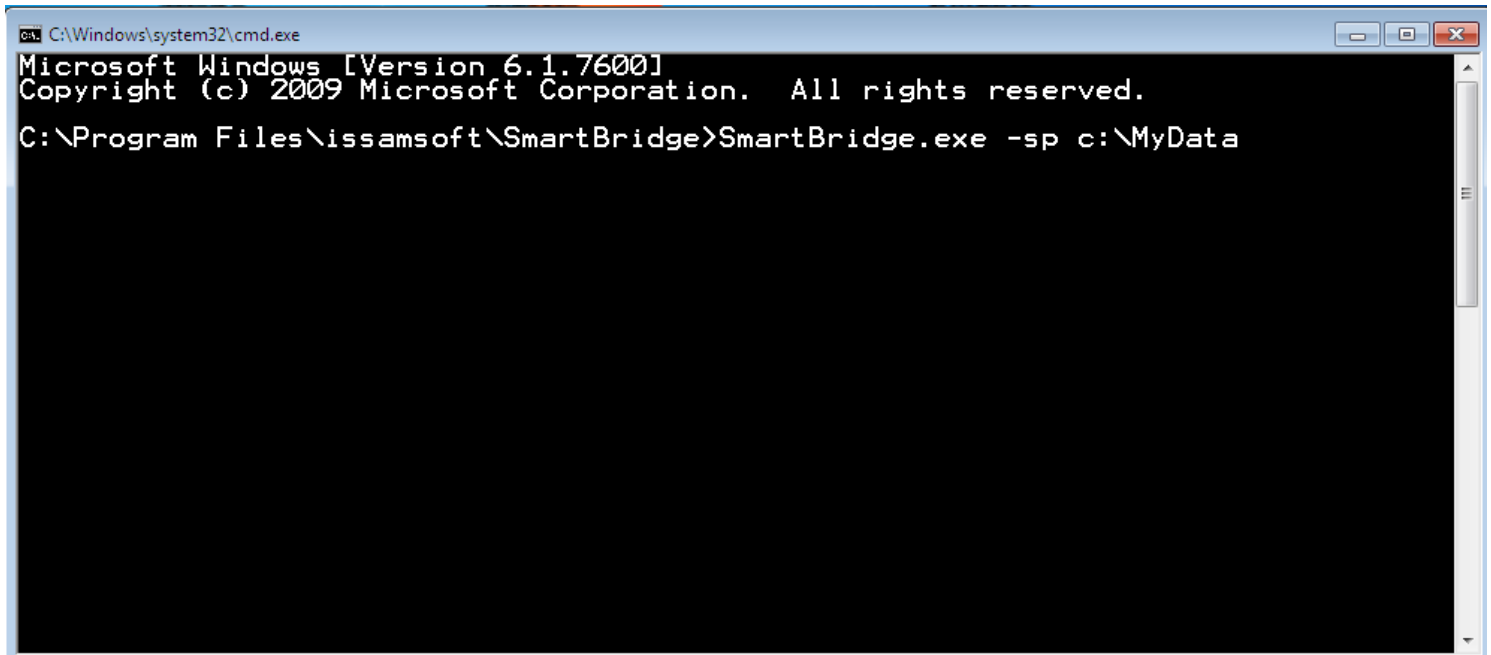

To change database path: close SmartBridge if running, run the Dos command prompt (cmd) and go to the SmartBridge installation directory, the default installation path is in ProgramFiles (C:\Program Files\issamsoft\SmartBridge)

Now write this command and press Enter

SmartBridge

SmartBridge.exe -sp [YOUR_PATH]

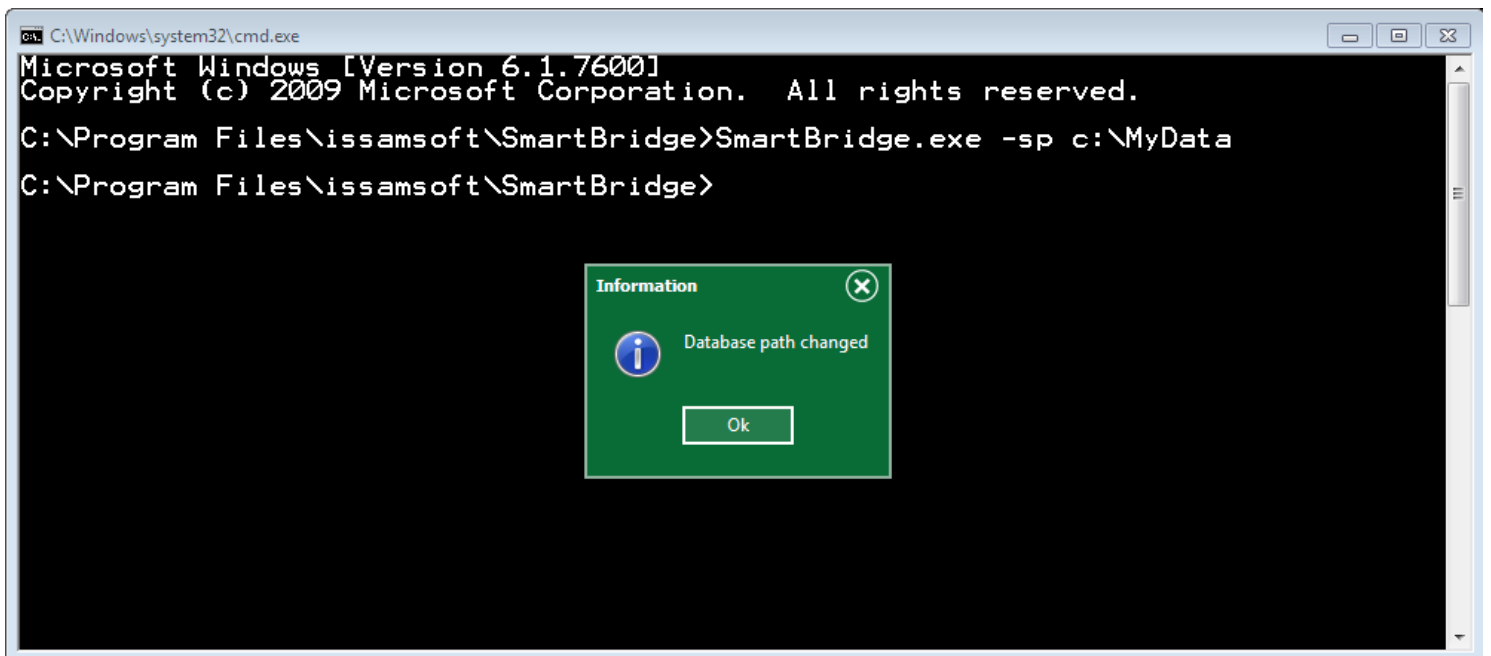

[YOUR_PATH] is the new database path.

```
C:\Windows\system32\cmd.exe
Microsoft Windows [Version 6.1.7600]
Copyright (c) 2009 Microsoft Corporation. All rights reserved.

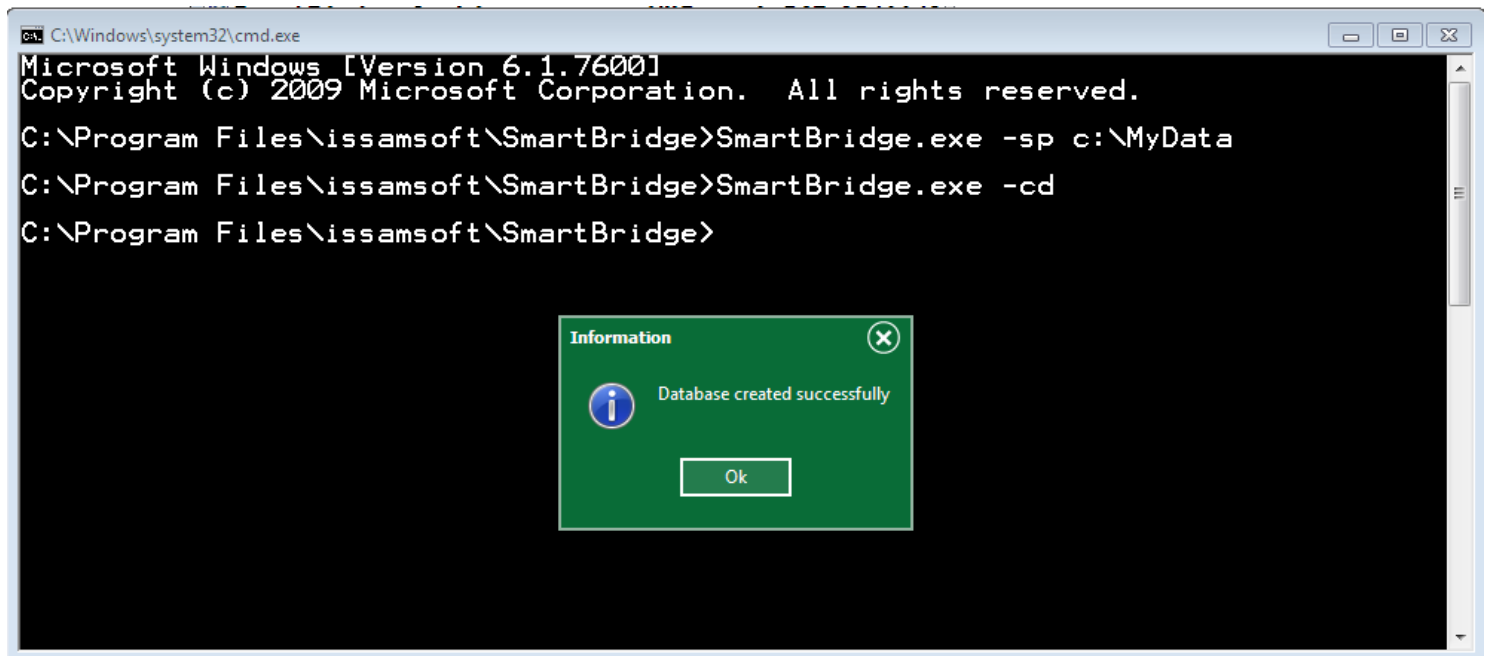

C:\Program Files\issamsoft\SmartBridge>SmartBridge.exe -sp c:\MyData
```

You will see a message on success.

If the new path does not have a database files, then SmartBridge will crash next time you start it, so, you have to create database on this empty path, and you can create a database from the command prompt using this command.

SmartBridge.exe -cd

Now you can run SmartBridge as usual. The ability to change database path and to create new database will give you option to make more than one database and to change between them easily.

Note1: every path should contains only one SamrtBridge database, you cannot create new database in a path that contains a database.

Note2: SmartBridge uninstaller will uninstall the database in the default path.

Note3: In registered version you can create new database from the [Setting screen](#) , the new database created from here will be placed in the current database path.

Note4: You can reset the database path to its default value by running the command -sp without path parameter like this

SmartBridge.exe -sp
